# ABOUT

## Main capabilities and specialties

- Production of "eye-safe" 1,54  $\mu\text{m}$ , Nd:YAG passively q-switched DPSS lasers
- Production of compact laser beam delivery systems, laser beam expanders, reducers, divergence compensators and laser power attenuators
- Production of standard and custom laser optical components, laser, and nonlinear crystals
- Design and development of custom laser gain, optical modules, and beam delivery devices
- Development and production of different laser crystal hosts and ion dopant combinations
- Conventional and state of the art laser optics
- Refurbishment of optical elements, crystals
- Optical and optomechanical design of laser gain modules and optical devices
- Clean room environment, optical design, mechanical design, CNC machining
- IBS and E-beam coating services

### FIRST R&D PROJECTS

Compact "eye-safe" 1,54  $\mu\text{m}$  wavelength nanosecond lasers "KAUKAS" series.  
ASGARD - a source for gas analysis and real time detection.

### NEW COMPANY DIVISION

Opening of "4Lasers" - new company division for Laser Components supplying.

2015

### COMPANY ESTABLISHMENT

Young and ambitious team was created in order to design, develop and commercialize custom and unique laser products.

2016

2017

### METROLOGY AND QUALITY ASSURANCE LAB

Newly set up laboratory improved quality management system that allows us to give relevant, reliable and timely test results.

2018

# Optogama

- Over 20 years of experience in the laser and photonics industry
- >70% of staff with a technical background in Laser Physics
- Strength in custom design and production of optical components, beam delivery devices
- Highly efficient communication and short lead time even for custom production
- Assurance of standardized production and quality according to ISO9001
- Guaranteed superior price-performance ratio

#### **FAST COMPANY GROWTH**

Financial Times announced Optogama as one of Europe's fastest-growing companies with an absolute growth rate - 250,2%.

#### **NEW PREMISES**

Wide space for company team expansion, new dedicated production facilities, ISO5/ISO6/ISO7 class metrology, assembling and R&D labs.

**2019**

#### **NEW LASERS**

Compact "eye-safe" 1,54  $\mu\text{m}$  wavelength nanosecond lasers "KAUKAS" series and Nd:YAG passively q-switched DPSS laser WAVEGUARD were introduced to the market.

**2020**

**2021**

#### **IMPLEMENTED ISO 9001 STANDARD**

Bureau Veritas certified the Management System of the Optogama in accordance with the ISO 9001:2015 requirements.

**2022**

**2023**

#### **NEW IBS AND E-BEAM OPTICAL COATING FACILITIES**

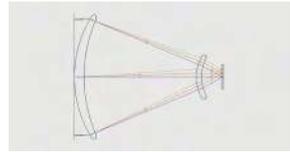

Expanded optics production facilities.

Optogama are looking forward to cooperating with you, assisting in implementing your projects from ideas until full accomplishment. We ready to help with first stages of your projects like prototyping or optical design preparations, to the final stages like cutting finished coated optics or checking final product quality in metrology.

# Optical design

## From simple lenses to complex assemblies

The company offers low- and high-power, diffraction-limited optical solutions, which are customized to meet customers specific needs. While developing systems we also consider integrating customers' mechanical and software interfaces.

## Available services, based on your requirements:

- Optical design and production of optical elements
- Lens, objectives, beam expanders and collimation optical design
- Beam delivery and light pass modules design
- Laser gain modules and resonators optical design
- Verification and optimization services for your optical design
- Optical material, gain media, optical coatings modeling, design and selection

## Features:

- Perception of your application
- Integrated optomechanical system and sequential refractive design
- Gaussian beam propagation simulation according to given beam parameters
- Design and manufacturing technologies according to specified requirements
- Optics and coatings optimization for high damage threshold and high transmittance

# Optics production

## From raw materials to precise optical components

Optogama manufactures variety of precision optical components, crystals and optical assemblies. Our dedicated and skilled team will ensure that you receive the optimal solution for your application.

## Starting from raw materials of various glasses or laser crystals we offer:

- Precision cutting and grinding
- Rounding and centration
- Double side and single side polishing
- Optical contacting and bonding
- Optical coatings
- Coated components cutting while protecting surface

### FEATURES AND CAPABILITIES

Diameter and size	1 - 180mm
Cutting tolerance	±0,02mm
Diameter or size tolerance	Up to +0/-0,02mm
Thickness tolerance	Up to ±0,02mm
Surface flatness (P-V)	Up to λ/10
Irregularity (P-V)	Up to 0,1λ
Centering (Beam Deviation)	3 arcmin
Surface Quality	10-5 to 80-50 S-D

# Coating services

## Ensuring top quality of coatings, offering compliance testing

The company offers design and manufacturing of customized optical components for laser and vision applications with an optimum of coating performance and cost efficiency.

## Available coating services based on these technologies:

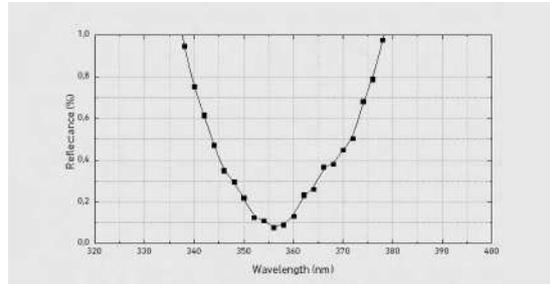

- Ion beam sputtering (IBS)
- E-beam evaporation
- Ion assisted e-beam evaporation (E-beam IAD)
- Magnetron sputtering (MS)
- Atomic layer deposition (ALD)

## The variety of coating technologies enables a high-volume fabrication for series products as well as a flexible prototype manufacturing for R&D of:

- Anti-Reflection Coatings
- High Power Reflective Coatings
- Ultrafast Coatings
- Infrared Coatings
- Metallic Coatings
- Beamsplitters
- Dichroic Filters
- ITO Coatings

## Optogama offer a wide variety of compliance testing to ensure the highest quality of precision optical thin film coating.

Testing capabilities include complete spectral measurement from 190nm to 12000nm absorption and scattering tests, wavefront error, GDD, humidity & durability testing in multiple temperature cycles.

# Optomechanical engineering

## Top expertise in custom precision optomechanical engineering

Our highly skilled and experienced mechanical engineers provide complete mechanical and optomechanical design services whether you need a new product, or an update and improve existing design.

We're specializing in custom precision mechanical and optomechanical engineering in the photonics industry. By combining our competences in optical and mechanical design and integrating high-quality custom components, our team delivers custom design solutions and engineering services.

## Main capabilities:

- Custom laser beam delivery and light path system engineering
- Optical systems engineering
- Optomechanical engineering and prototyping
- Designing with Solidworks and Zemax
- Optical, mechanical and electronics integration

## Features:

- Development of concept
- Detailed analysis, prototyping and testing
- Using best practices for CAD and CAM

# Mechanical workshop

## Design and production of precision optomechanical parts

We offer experience in producing of precision optomechanical parts and components for laser and optical systems, biotechnology, medicine and other industries. Starting from design using "Solidworks" and using "CAMWorks" for CAM programming, we design and produce our own fixtures for part manufacturing.

## Manufacturing capabilities:

CNC turning: DMG MORI CLX 450 High-end universal turning machine with direct measuring system.

- Max. workpiece diameter — 400 mm, max. workpiece length — 800 mm
- The machine has a Y axis, active tools and two spindles
- Efficient manufacturing of parts, especially series production, due to a bar feeder

## CNC Milling: HAAS VF2-SS and DMG DMU 50:

- Max dimensions on X axis — 762 mm, on Y axis — 450 mm; on Z axis — 500 mm; Workpiece dimensions depend on the finished part's shape, material, and elements which it contains
- Rotations on C axis  $\pm 360^\circ$ , on B axis  $\pm 110^\circ/-5^\circ$
- 5 axis and 3+2 milling provides the ability to efficiently process parts of different and unique configurations

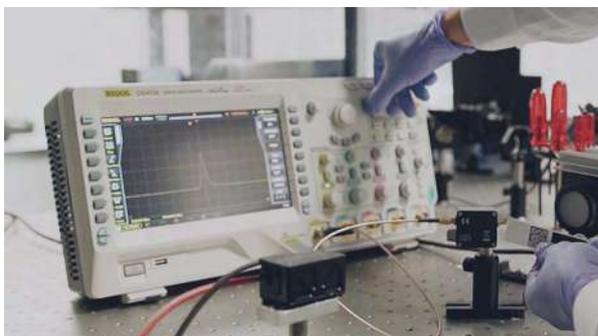

**In addition to metal processing we offer Anodizing, Sand blasting, Glass blasting, Tumbling, Engraving, vacuum cleaning and other services**

## Features:

- From single piece to serial production
- Prompt delivery from 1 week
- Quality control services (CMM HEXAGON Global Lite)
- Consultations and product design optimization

# Metrology and quality assurance

## Standard and non-standard measurements

The state-of-the-art devices and tools are used to test optical elements, which are integrated into lasers and laser-related systems.

## Standard metrology services:

- Wavefront distortion in transmittance/reflectance for parallel and spherical optics (Verifire, Zygo)
- Transmittance and reflectance of optical elements in 200-1700 nm wavelength range (Photon RT, EssentOptics)
- Optical microscopy with polarized light option (Olympus)
- Beam quality (BeamSquared, Ophir)
- Wavelength stability for lasers with 3 pm resolution (WS6, HighFinesse)
- Environmental temperature & humidity tests to test laser performance, coating durability, glue aging, etc. (Binder, Espec)
- Shock and vibration tests

## Non-standard test measurements

In case you did not find test measurement that suits your needs, please contact us for non-standard services.

# Laser development

## Experts in custom designed laser solutions

Our team has an expertise to develop, design, test and produce custom designed laser solutions to meet your unique requirements and stringent OEM applications. It is also available to modify or upgrade standard commercial and scientific lasers.

Our knowledge is based on diode laser-pumped solid-state laser design and assembling, based on passive Q-switching. Experience working with Er,Yb:glass, Pr:YLF, Nd:YAG, Er:YAG, Nd:YVO, Ti:Sapphire and other laser materials allows us to design and test your laser prototypes within short time.

### Available solutions:

- From simple modifications to the design of specific and innovative prototype
- Customer visits to assess the requested project and consultations with teams from R&D, including mechanical and optical design groups
- Customization and special engineering services

### Features:

- From optical design to prototype validation
- Investigations of various laser gain media and passive q-switching crystal based models
- Side and end LD pumping
- Prototyping and environmental testing

# Laser crystals material development and refurbishment

## Crystals growth, laser gain media development, crystals refurbishment

We are experts in crystal growth also capable of design and development of custom laser gain and optical modules, state-of-the-art monolithic crystal assemblies and damaged crystals refurbishment service. Our expertise comes from cooperation with scientific and industrial partners through numerous R&D contracts. For damaged crystals we provide cost-effective crystal refurbishment service, including repolishing, recoating, and characterization.

### Capabilities:

- Ultrafast laser gain media (Yb:KGW, Yb:KYW, Ti:Sapphire, CaF<sub>2</sub>, Pr:YLF, Tm:YLF, Ho:YLF, Er:YLF)
- Passive Q-switch elements (crystalline or ceramic Co:Spinel, Cr:YAG, V:YAG)
- Photorefractive crystals (BSO and BGO, SBN)

### Available crystal growth techniques:

- Stepanov
- Modified Flux growth
- Kyropoulos
- Czochralski

### Features:

- Custom gain and doping levels
- Material characterization and processing
- Production of final elements

### REPOLISHING OF LASER, NONLINEAR AND PHOTOREFRACTIVE CRYSTALS

Diameter and size	1 - 180mm
Surface quality	Up to 10-5 S-D
Surface flatness (P-V)	Up to $\lambda/10$ @ 632.8 nm (for 6x6 mm and smaller crystals)
Coatings	Upon request

### Features:

- Fast delivery from 1 week
- Repolishing & resizing
- Recoating
- Metrology and quality assurance
- Final coated and polished element cutting with secured surfaced

Optogama team designs and manufactures a variety of "eye-safe" 1,54  $\mu\text{m}$  diode pumped passively q-switched erbium glass laser transmitters as well as 1064 nm or 532nm wavelength Nd:YAG passively q-switched lasers. Optogama developed CW laser model at 1,5  $\mu\text{m}$  lasing wavelength with an erbium ion doped active laser medium.

# Laser

rs

Nd:YAG passively q-switched DPSS lasers "Waveguard"

"Eye-safe" 1,54  $\mu\text{m}$  ns lasers "KAUKAS"

"Eye-safe" 1,5  $\mu\text{m}$  lasers "KAUKAS CW"

1,54  $\mu\text{m}$  ns lasers "Ranger"

# Nd:YAG passively q-switched DPSS lasers "Waveguard"

## Main features

- Robust and compact design
- Internal and external TTL triggering
- Laser controller with USB or RS232 interface
- OEM version available

## Application examples

- Material processing & micromachining
- LIBS
- Marking
- LIDAR & Laser Ranging
- Biophotonics

The typical configuration of these lasers is based on a Nd:YAG crystal placed in a cavity of a few millimeters in length, leading to a very compact laser design with a surprising performance, such as sub-nanosecond pulse widths and a peak power of several tens of kilowatts. State-of-the-art robust laser design allows it to be easily integrated into various laser applications and setups. Additional harmonics modules for 532 nm, 355 nm, or 266 nm wavelengths are available on request for all models. "Waveguard" series lasers offer wavelength stabilization possibility up to 3 pm and laser modules with a photodiode to control pulse repetition rate are available on request for all models.

## Standard specifications

LASERS "WAVEGUARD" STANDARD SPECIFICATIONS	
Wavelength	1064 nm*
Wavelength tolerance	±1 nm
Repetition rate	1 Hz - 10 kHz
Pulse energy	Up to 400 µJ
Energy stability, STD	<2 %
Polarization contrast	>100:1
Beam diameter at exit window	<1 mm
Beam divergence	<5 mRad
Beam quality	M <sup>2</sup> < 1,5
Beam profile	TEM <sub>00</sub>

\*Custom wavelength available

## Standard products

LASER MODEL	WAVELENGTH	REPETITION RATE	PULSE ENERGY	AVERAGE OUTPUT POWER	PULSE DURATION	SKU	PRICE
WAVEGUARD-A	1064 nm	10 kHz	10 µJ	100 mW	<1 ns	8881	Request
WAVEGUARD-D	1064 nm	1 kHz	120 µJ	120 mW	<1 ns	2248	6250 €
WAVEGUARD-E	1064 nm	100 Hz	400 µJ	40 mW	<1 ns	8795	6500 €
WAVEGUARD-2D	532 nm	1 kHz	50 µJ	50 mW	<1 ns	8820	6950 €
WAVEGUARD-2E	532 nm	100 Hz	150 µJ	15 mW	<1 ns	8964	7250 €
WAVEGUARD-D-ARR	1064 nm	1 Hz - 1 kHz	120 µJ	120 mW	<1 ns	19214	6700 €
WAVEGUARD-E-ARR	1064 nm	1 Hz - 100 Hz	400 µJ	40 mW	<1 ns	19215	6950 €
WAVEGUARD-2D-ARR	532 nm	1 Hz - 1 kHz	50 µJ	50 mW	<1 ns	19532	7450 €
WAVEGUARD-2E-ARR	532 nm	1 Hz - 100 Hz	150 µJ	15 mW	<1 ns	19533	7700 €

## Utility requirements

LASERS "WAVEGUARD" UTILITY REQUIREMENTS	
Laser module dimensions	170 x 103 x 64 mm (L x W x H)
Laser driver dimensions	164 x 105 x 44 mm (L x W x H)
Pump current	8-10 A
Electric	100-240 V AC, 50/60 Hz
Working temperature	20-28 °C
Cooling	TEC element + active air cooling

# “Eye-safe” 1,54 $\mu\text{m}$ ns lasers “KAUKAS 2”

## Main features

- Compact robust design
- Wide operating temperature range
- 2 mJ energy model
- OEM version available

## Application examples

- LIDAR & Laser Ranging
- LIBS
- Metrology and instrumentation

„Eye-safe” 1,54  $\mu\text{m}$  wavelength nanosecond lasers series „KAUKAS 2” possess a unique compact design and are available in OEM models for dedicated applications such as LIDAR or laser ranging. “Eye-safe” 1,54  $\mu\text{m}$  wavelength lasers model „KAUKAS 2” delivers up to 2 mJ energy per pulse with a repetition rate of up to 2 Hz.

## Standard specifications

LASERS “KAUKAS 2” STANDARD SPECIFICATIONS	
Wavelength	1534 nm
Wavelength tolerance	$\pm 1$ nm
Repetition rate	SS - 2 Hz
Pulse energy	>2 mJ
Energy stability, STD	<3 %
Pulse duration	<11 ns
Beam diameter at exit window	<1 mm
Beam quality	$M^2 < 2$
Beam profile	TEM <sub>00</sub>

## Standard products

LASER MODEL	WAVELENGTH	REPETITION RATE	PULSE ENERGY	PULSE DURATION	OPERATING TEMPERATURE	WEIGHT	POWER SUPPLY AND DRIVER	SKU	PRICE
KAUKAS 2	1534 nm	SS-2Hz	>2 mJ	<11 ns	-20°C to +60°C	0,1 kg	Excluded	30828	3600 €
					+10°C to +40°C	0,1 kg	Excluded	30920	3400 €
					+10°C to +40°C	0,1 kg	Included	30943	4500 €

## Utility requirements

LASERS “KAUKAS 2” UTILITY REQUIREMENTS	
Laser module dimensions	61 x 33 x 29,5 mm (L x W x H)
Laser driver dimensions	128 x 83 x 48 mm (L x W x H)
Pump current	<100 A
Pump duration	<4 ms
Electric	100-240 V AC, 20 A, 50/60 Hz
Working temperature	-20 °C - +60 °C
Cooling	Passive air cooling

# "Eye-safe" 1,54 $\mu\text{m}$ ns lasers "KAUKAS 3"

## Main features

- Compact robust design
- High energy per pulse (>3 mJ)
- Wide operating temperature range
- OEM version available

## Application examples

- LIDAR & Laser Ranging
- LIBS
- Metrology and instrumentation
- Research

"Eye-safe" 1,54  $\mu\text{m}$  wavelength nanosecond lasers "KAUKAS 3" possess a unique compact design and are available in OEM models for dedicated applications such as LIDAR or laser ranging. This specific "Eye-safe" 1,54  $\mu\text{m}$  wavelength lasers model "KAUKAS 3" delivers up to 3 mJ energy per pulse with a repetition rate of up to 1 Hz.

## Standard specifications

LASERS "KAUKAS 3" STANDARD SPECIFICATIONS	
Wavelength	1534 nm
Wavelength tolerance	$\pm 1$ nm
Repetition rate	55-1Hz
Pulse energy	>3 mJ
Energy stability, STD	<3 %
Pulse duration	<8 ns
Beam diameter at exit window	<1 mm
Beam quality	$M^2 < 2$
Beam profile	TEM <sub>00</sub>

## Standard products

LASER MODEL	WAVELENGTH	REPETITION RATE	PULSE ENERGY	PULSE DURATION	OPERATING TEMPERATURE	WEIGHT	POWER SUPPLY AND DRIVER	SKU	PRICE
KAUKAS 3	1534 nm	55-1 Hz	>3 mJ	<8 ns	-20°C to +60°C	0,1 kg	Excluded	30829	4000 €
					+10°C to +40°C	0,1 kg	Excluded	30944	3800 €
					+10°C to +40°C	0,1 kg	Included	30945	4900 €

## Utility requirements

LASERS "KAUKAS 3" UTILITY REQUIREMENTS	
Laser module dimensions	61 x 33 x 29.5 mm (L x W x H)
Laser driver dimensions	128 x 83 x 48 mm (L x W x H)
Pump current	<100 A
Pump duration	<4 ms
Electric	100-240 V AC, 20 A, 50/60 Hz
Working temperature	- 20 - +60 °C
Cooling	Passive air cooling

# "Eye-safe" 1,54 $\mu\text{m}$ ns lasers "KAUKAS HR"

## Main features

- Compact robust design
- Energy per pulse  $>30 \mu\text{J}$  @ 1 kHz
- Pulse repetition rate control
- OEM version available

## Application examples

- LIDAR & Laser Ranging
- LIBS
- Metrology and instrumentation
- Automotive

"Eye-safe" 1,54  $\mu\text{m}$  wavelength nanosecond high repetition rate (up to 1 kHz) DPSS lasers „KAUKAS HR“ possess a unique compact design and are available in OEM models for dedicated applications. „KAUKAS HR“ laser models have adjustable repetition rate feature. They deliver more than 30  $\mu\text{J}$  energy per pulse with a repetition rate of up to 1 kHz available on request.

## Standard specifications

LASERS "KAUKAS HR" STANDARD SPECIFICATIONS	
Wavelength	1534 nm
Wavelength tolerance	$\pm 1 \text{ nm}$
Repetition rate	100 Hz - 1 kHz
Pulse energy	$>30 \mu\text{J}$
Energy stability, STD	$<2 \%$
Pulse duration	$<6 \text{ ns}$
Beam diameter at exit window	$<1 \text{ mm}$
Beam quality	$M^2 < 2$
Beam profile	TEM <sub>00</sub>

## Standard products

LASER MODEL	WAVELENGTH	REPETITION RATE	PULSE ENERGY	PULSE DURATION	OPERATING TEMPERATURE	WEIGHT	SKU	PRICE
KAUKAS HR	1534 nm	100 Hz	$>45 \mu\text{J}$	$<7 \text{ ns}$	15 - 35 °C	0,2 kg	9746	4000 €
		1 kHz	$>30 \mu\text{J}$	$<7 \text{ ns}$	15 - 35 °C	0,2 kg	15575	4150 €

## Utility requirements

LASERS "KAUKAS HR" UTILITY REQUIREMENTS	
Laser module dimensions	111 x 34 x 25,5 mm (L x W x H)
Laser driver dimensions	164 x 105 x 44 mm (L x W x H)
Pump current	$<7 \text{ A}$
Electric	100-240 V AC, 50/60 Hz
Working temperature	15 - 35 °C
Cooling	Passive air cooling

# “Eye-safe” 1,54 $\mu\text{m}$ ns lasers “KAUKAS 0.3”

## Main features

- Robust design
- Integration into portable devices
- OEM version available

## Application examples

- LIDAR & Laser Ranging
- LIBS
- Metrology and instrumentation

„Eye-safe” 1,54  $\mu\text{m}$  wavelength nanosecond lasers “KAUKAS 0.3” possess a unique compact design and are available in OEM models for dedicated applications. This specific “eye-safe” 1,54  $\mu\text{m}$  wavelength lasers model “KAUKAS 0.3” delivers up to 0.3 mJ energy per pulse with a repetition rate of up to 10 Hz. The unique laser optical design requires only up to 10 A pump current allowing this laser to be integrated into portable energy – efficient devices.

## Standard specifications

LASERS “KAUKAS 0.3” STANDARD SPECIFICATIONS	
Wavelength	1534 nm
Wavelength tolerance	$\pm 1$ nm
Repetition rate	1-10 Hz
Pulse energy	0.3 mJ
Energy stability, STD	<2 %
Pulse duration	<5 ns
Beam diameter at exit window	<1 mm
Beam quality	$M^2 < 2$
Beam profile	TEM <sub>00</sub>

## Standard products

LASER MODEL	WAVELENGTH	REPETITION RATE	PULSE ENERGY	PULSE DURATION	OPERATING TEMPERATURE	WEIGHT	SKU	PRICE
KAUKAS 0.3	1534 nm	1-10 Hz	0.3 mJ	<5 ns	-20 - +40 °C	0,2 kg	32273	3200 €

## Utility requirements

LASERS “KAUKAS 0.3” UTILITY REQUIREMENTS	
Laser module dimensions	85 x 26 x 20 mm (L x W x H)
Laser driver dimensions	128 x 83 x 48 mm (L x W x H)
Pump current	<10 A
Pump duration	<4 ms
Electric	100-240 V AC, 3,6 A, 50/60 Hz
Working temperature	-20 - +40 °C
Cooling	Passive air cooling

# 1,54 $\mu\text{m}$ ns lasers "Ranger"

## Main features

- Compact design
- Integration into portable devices
- OEM version available

## Application examples

- LIDAR & Laser Ranging
- LIBS
- Metrology and instrumentation
- Automotive

The "RANGER" nanosecond lasers at a wavelength of 1.54  $\mu\text{m}$  feature a distinctive compact design and are offered in OEM configurations tailored for specific uses like LIDAR or laser ranging applications.

The "RANGER" laser operating at a 1.54  $\mu\text{m}$  wavelength can provide a pulse energy of up to 1.5 mJ, and it achieves a repetition rate ranging from 5 to 10 Hz.

## Standard specifications

LASERS "RANGER" STANDARD SPECIFICATIONS	
Wavelength	1534 nm
Wavelength tolerance	$\pm 1$ nm
Repetition rate	5-10 Hz
Pulse energy	>1,5 mJ@5Hz >1.3 mJ@10Hz
Energy stability, STD	<3 %
Pulse duration	<6 ns
Beam diameter at exit window	<1 mm
Beam quality	$M^2 < 2$
Beam profile	TEM <sub>00</sub>

## Standard products

LASER MODEL	WAVELENGTH	ENERGY PER PULSE	REPETITION RATE	PULSE DURATION	BEAM DIAMETER (ON OC)	OPERATING TEMPERATURE	POWER SUPPLY AND DRIVER	SKU	PRICE

## Utility requirements

LASERS "RANGER" UTILITY REQUIREMENTS	
Laser module dimensions	62 x 33 x 24 mm (L x W x H)
Laser driver dimensions	164 x 78 x 46 mm (L x W x H)
Pump current	<100 A
Pump duration	<2,5 ms
Operating environment temperature	-40 °C ... +60 °C
Cooling	Passive air cooling

# "Eye-safe" 1,5 $\mu\text{m}$ lasers "KAUKAS CW"

## Main features

- Up to 400 mW
- Compact DPSS design
- Various 1,5  $\mu\text{m}$  wavelength models
- High beam quality

## Application examples

- Optical instrumentation
- Metrology and spectroscopy
- Life sciences

"KAUKAS CW" series of diode-pumped, solid-state laser models that deliver up to 400 mW of continuous-wave power at several 1,5  $\mu\text{m}$  wavelengths. These erbium-doped gain media based economical, active air-cooled lasers provide a unique combination of high performance, exceptional lifetime, and outstanding reliability. "KAUKAS CW" "eye-safe" lasers offer a diffraction-limited, TEM<sub>00</sub> output beam, excellent power stability, and narrowband spectrum.

## Standard specifications

"KAUKAS CW" LASERS STANDARD SPECIFICATIONS	
Wavelength	1,5 $\mu\text{m}$
Wavelength tolerance	$\pm 1$ nm
Laser operating mode	CW
Average output power	up to 400 mW
Power stability	<3 %
Polarization contrast	>100:1
Beam diameter at exit window	<1 mm
Beam divergence	<5 mRad
Beam quality	M <sup>2</sup> < 1,5
Beam profile	TEM <sub>00</sub>

Photorefractive  
crystals

Laser crystals, glasses and ceramics are used as optical gain sources in solid-state lasers. These media are typically doped with rare-earth ions (e.g. neodymium, ytterbium, or erbium) or transition metal ions (titanium or chromium).

Optogama develops and supplies different laser crystal hosts and ion dopant combinations for fundamental, applied research and industrial applications. Available crystal growth techniques: Stepanov, Modified Flux growth, Kyropoulos and Czochralski.

# Ti:Sapphire crystals

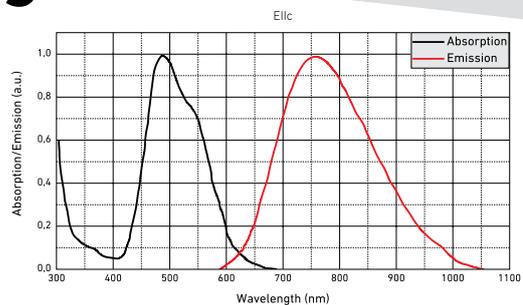

## Main features

- Excellent thermal conductivity
- Broad gain bandwidth
- Wide range of possible pump wavelengths (typically 532 nm)
- Custom crystals available upon request

## Application examples

- Mode-locked lasers with ultrashort pulses
- Multi-pass amplifiers and regenerative amplifiers

Titanium-doped sapphire ( $\text{Ti}^{3+}:\text{Al}_2\text{O}_3$ ) is a widely used transition-metal-doped laser crystal.  $\text{Ti}^{3+}$  ion has a very large gain bandwidth, that opens possibility to obtain very wide wavelength tunability realized in short pulse lasers.

To obtain crystals with good optical quality  $\text{Ti}^{3+}$  doping concentration should not exceed 0,25 at.%. Ti:Sapphire crystal is characterized by a short upper-state lifetime and a high saturation power. All these properties lead to the necessity of using a strongly focused pump beam.

## Standard specifications

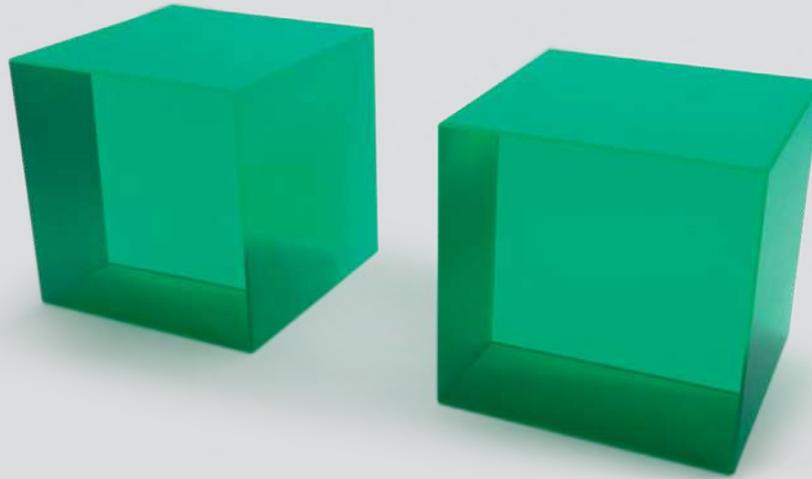

TI:SAPPHIRE CRYSTALS	
Orientation	a-cut
Absorption	90-95% of 532 nm pump radiation
Figure of merit	>150 (for 15 mm and longer crystals)
Clear aperture	>90%
Face dimensions tolerance	+0,0/-0,1 mm
Length tolerance	±0,1 mm
Parallelism error	<30 arcsec
Perpendicularity error	<10 arcmin
Protective chamfers	<0,15 mm at 45°
Surface quality	10-5 5-D
Surface flatness	<λ/10@632,8 nm (for 6x6 mm and smaller crystals)
Wavefront distortion	λ/4@632,8 nm
Coatings	AR(R<1%)@532 nm + AR(R<0,3%)@750-850 nm on both faces
LIDT	>2 J/cm²@800 nm, 300 ps
Mount	Unmounted

## Properties

SPECTROSCOPIC AND THERMO-MECHANICAL PROPERTIES	
Absorption peak wavelength	~500 nm
Absorption cross-section at peak wavelength	$38 \times 10^{-20} \text{ cm}^2$
Laser wavelength	790 (670-1070) nm
Lifetime of energy level	3,2 μs
Emission cross-section @790 nm	$41 \times 10^{-20} \text{ cm}^2$
Refractive index @800 nm	1,76
Crystal structure	hexagonal
Density	3,98 g/cm³
Mohs hardness	9
Thermal conductivity	$33 \text{ Wm}^{-1} \text{ K}^{-1}$
dn/dT	$13 \times 10^{-6} \text{ K}^{-1}$
Thermal expansion coefficient	$5 \times 10^{-6} \text{ K}^{-1}$
Typical doping level	0,1-0,25 at%

# Cr:LiSAF crystals

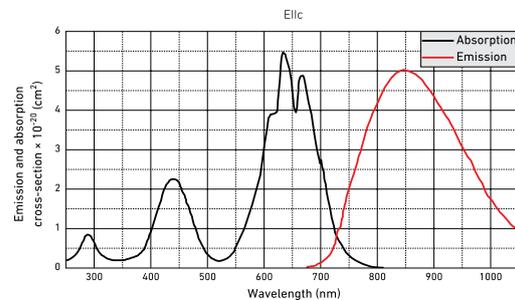

## Main features

- Broad absorption and emission bands
- Nonlinear refractive index is about four times lower than that of Ti:Sapphire
- Custom crystals available upon request

## Application examples

- Femtosecond lasers and CPA laser systems

Cr<sup>3+</sup>:LiSAF gain medium possesses a broad emission band in the near infrared that allows a widely tunable laser operation and generation of ~10 fs light pulses via mode-locking technique. Cr:LiSAF crystals can be grown with a very low loss level (<0,2%/cm). It enables to construct high-Q-cavities, resulting in lasing thresholds as low as 2 mW and slope efficiencies above 50%. Moreover, nonlinear refractive index of Cr:LiSAF is about four times lower than that of Ti:sapphire, which reduces parasitic nonlinearities in the ultrashort pulse generation and amplification applications.

## Standard specifications

CR:LiSAF CRYSTALS	
Orientation	a-cut
Clear aperture	>90%
Face dimensions tolerance	+0,0/-0,1 mm

# Pr:YLF crystals

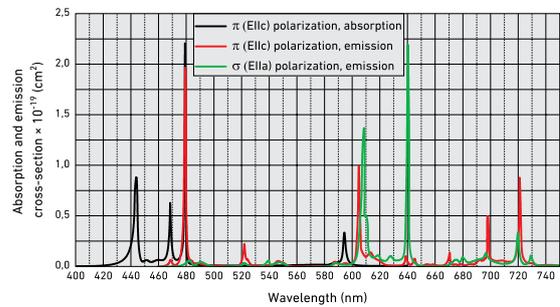

## Main features

- High absorption and emission cross-sections ( $\sim 10^{-19} \text{ cm}^2$ )
- Good overlapping of the absorption band in the blue spectral region with the emission lines of the InGaN laser diodes and  $2\omega$ -OPSL
- Custom crystals available upon request

## Application examples

- Diode-pumped solid-state lasers for precise and efficient processing of metals such as copper or gold, entertainment industry and science

Very few laser materials have necessary properties for realization of lasing in the visible spectral range. Trivalent praseodymium ( $\text{Pr}^{3+}$ ) is known to be an interesting laser ion for using with solid-state lasers in the visible spectral range because of its energy levels scheme, providing several transitions in the red (640 nm,  ${}^3P_0$  to  ${}^3F_2$ ), orange (607 nm,  ${}^3P_0$  to  ${}^3H_6$ ), green (523 nm,  ${}^3P_0$  to  ${}^3H_5$ ), and dark red (720 nm,  ${}^3P_0$   ${}^3F_3+{}^3F_4$ ) spectral regions.  $\text{Pr}^{3+}$ :YLF has been found to be a promising laser material for producing visible lasers directly and UV lasers through intracavity second-harmonic generation.

# Ho:YLF crystals

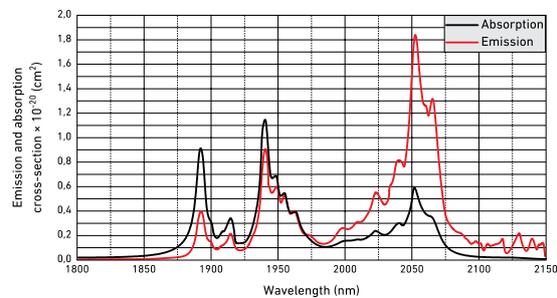

## Main features

- Long upper laser level lifetime
- High emission cross-section
- Naturally birefringent material
- Low value of  $dn/dT$  leading to a weak thermal lensing
- Custom crystals available upon request

## Application examples

- Remote sensing and pollutant detection
- Industry
- Defence

Direct pumping of Ho:YLF crystals excludes losses of  $Tm^{3+}$  to  $Ho^{3+}$  energy transfer process. Ho:YLF crystal is characterized by a long lifetime of  $^5I_7$  energy level which results in an excellent performance in Q-switched operation.

# Tm, Ho:KYW crystals

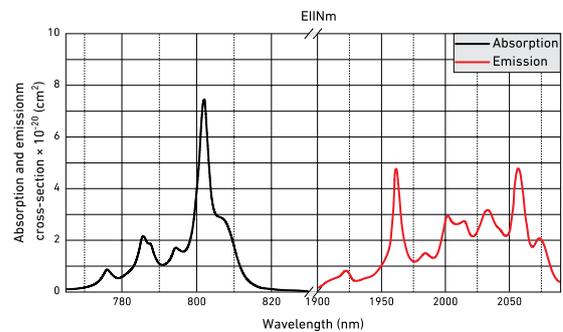

## Main features

- Large and broad polarized absorption and emission bands
- Efficient energy transfer from Tm<sup>3+</sup> to Ho<sup>3+</sup>
- High dopant concentration with low concentration-quenching
- Custom crystals available upon request

## Application examples

- 2 μm lasers for remote sensing (LIDAR technology), metrology and medical applications
- Pump source of mid-IR optical parametric oscillators (OPOs)

Ho<sup>3+</sup> ions are characterized by higher emission cross-sections and longer upper laser level lifetimes compared to their Tm<sup>3+</sup> counterparts. These features are desirable for a low-threshold and efficient laser operation. Ho<sup>3+</sup> does not possess any strong absorption lines that are well matched to the outputs of commercially available laser diodes, therefore co-doping of Ho<sup>3+</sup> with Tm<sup>3+</sup> is chosen for an efficient operation across the 2 μm region through the energy transfer route from Tm<sup>3+</sup> to Ho<sup>3+</sup>. Tm, Ho:KYW crystals are characterized by large and broad polarized absorption and emission bands, efficient energy transfer from Tm<sup>3+</sup> to Ho<sup>3+</sup>.

# Nd:KGW crystals

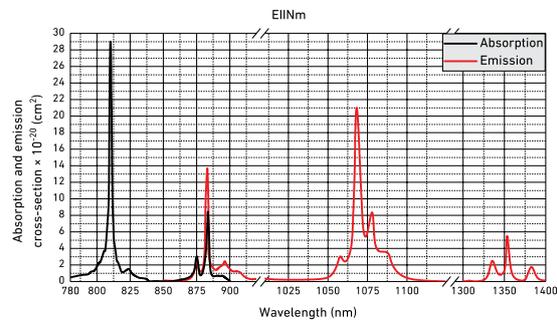

## Main features

- Suitable for generation of picosecond light pulses, well suited for diode-pumped lasers
- High storage density and low laser threshold
- Efficient Raman converter
- Custom crystals available upon request

## Application examples

- Diode-pumped Q-switched lasers emitting in the "eye-safe" spectral range for laser rangefinders
- Raman converter

Nd:KGW crystal is a good choice for generation of picosecond laser pulses. These crystals are characterized by a lower stimulated emission cross-section compared to Nd:YAG crystals, therefore provide a better performance in Q-switched operation. It is worth to mention, that it is possible to use the Nd:KGW laser crystal itself as a Raman converter.

## Standard specifications

# Nd:YAG crystals

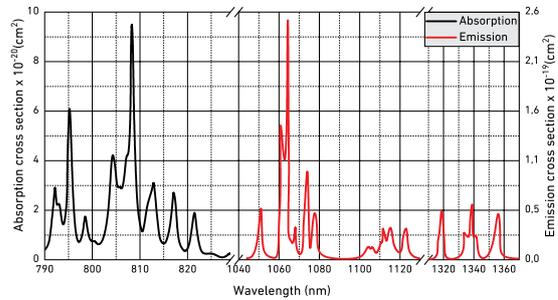

## Main features

- Isotropic crystal (cubic symmetry)
- High thermal conductivity
- High optical quality and large diameter boules grown by Czochralski growth method
- Low lasing threshold and wide absorption band at near 808 nm that coincides with the emission of AlGaAs laser diodes
- Custom crystals available upon request

## Application examples

- CW and pulsed operation at 1064 nm, 532 nm, 355 nm, 266 nm
- Material processing, welding, cutting
- Laser systems for medical applications

Nd:YAG crystal is the most widely used solid-state laser material. These crystals are characterized by relatively small gain bandwidth, which allows achieving a high gain efficiency and a relatively low lasing threshold. Nd:YAG crystals feature excellent thermal and mechanical properties. Nd:YAG of high optical quality and large diameter can be grown.

# Nd:YLF crystals

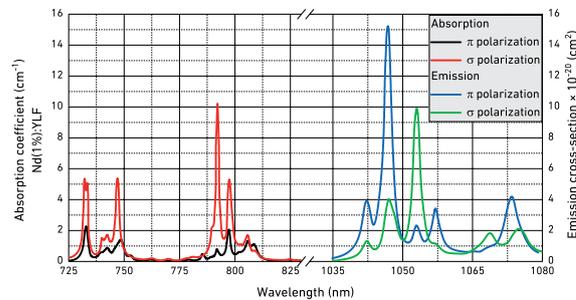

## Main features

- Long lifetime of  ${}^4F_{3/2}$  neodymium energy level
- Considerably softer and more brittle than Nd:YAG is
- Nd:YLF (a-cut) crystals that are used inside a laser optical resonator are self-polarizing
- Custom crystals available upon request

## Application examples

- CW and pulsed operation at 1047nm and 1053 nm
- Material processing, welding, cutting

Nd<sup>3+</sup>:YLF crystal is characterized by a long lifetime of  ${}^4F_{3/2}$  neodymium energy level. Compared to Nd:YAG, the lower thermal conductivity and a weak negative dn/dT lead to lower thermal distortions and allow to achieve a better output beam quality. Another distinctive feature is the high UV transparency, which is favorable for pumping with xenon flashlamps.

## Standard specifications

ND:YLF CRYSTALS	
Orientation	a-cut, c-cut
Clear aperture	>90%
Face dimensions tolerance	+0,0/-0,1 mm
Length tolerance	±0,1 mm
Parallelism error	<20 arcsec
Perpendicularity error	<10 arcmin
Protective chamfers	<0,1 mm at 45°
Surface quality	20-10 S-D
Surface flatness	<λ/8@632,8 nm
Wavefront distortion	λ/4@632,8 nm
Coatings	AR(R<0,5%)@790-810 nm + AR(R<0,2%)@1047-1053 nm on both faces
Laser induced damage threshold	>10 J/cm <sup>2</sup> @1064 nm, 10 ns
Mount	Unmounted

## Properties

SPECTROSCOPIC AND THERMO-MECHANICAL PROPERTIES	
Absorption peak wavelength	792 nm
Absorption coefficient at peak	10 cm <sup>-1</sup>
Absorption bandwidth at peak wavelength	~5 nm

# Nd:YVO<sub>4</sub> crystals

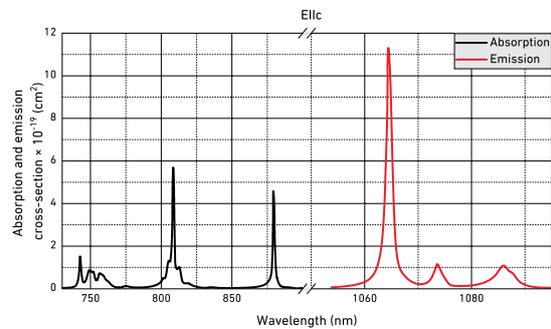

## Main features

- High absorption and gain cross-sections
- Strongly polarization dependent absorption and emission spectra ( $\pi$ -polarization is preferable)
- Shorter (compared with Nd:YAG) upper-state lifetime
- High optical quality and large diameter boules obtained by Czochralski growth method
- Custom crystals available upon request

## Application examples

- High repetition rate Q-switched lasers for marking and engraving
- Mode-locked lasers for spectroscopy and research

Compared to Nd<sup>3+</sup>:YAG crystals, the Nd<sup>3+</sup>:YVO<sub>4</sub> crystal has much higher absorption and emission cross-sections, a broader gain bandwidth and wavelength range for pumping, a shorter upper-state lifetime, a higher refractive index, thus it is characterized by a lower thermal conductivity. Nd:YVO<sub>4</sub> crystals are well suited for passively mode-locked lasers with high pulse repetition rates.

A drawback of Nd:YVO<sub>4</sub> lasers is that it is impossible to achieve pulse energies as high as it is achievable with Nd:YAG lasers at Q-switched operation, due to the lower upper-state lifetime and higher gain efficiency. In conclusion, Nd:YVO<sub>4</sub> is better suited as an active medium of high pulse repetition rate Q-switched lasers and CW lasers with a lower lasing threshold.

## Standard specifications

ND:YVO <sub>4</sub> CRYSTALS

# Yb:KGW crystals

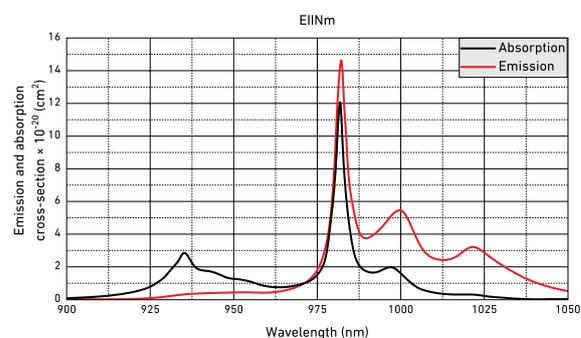

## Main features

- Large gain bandwidth
- High emission cross-sections
- Small quantum defect
- High doping level
- High thermal conductivity
- Custom crystals available upon request

## Application examples

- Femtosecond lasers and regenerative amplifiers
- CW and passively mode-locked thin-disk lasers

Yb<sup>3+</sup>:KGW crystals possess a large gain bandwidth that enables to obtain <100 fs pulse duration in mode-locked regime of operation. Compared with other ytterbium-doped gain media with a similarly large gain bandwidth, ytterbium-doped tungstate has fairly high emission cross-sections. Ytterbium doping concentration in Yb:KGW crystals can be up to 5 at. % without a significant quenching. Thermal conductivity of common double tungstates is in the range of 3–4 Wm<sup>-1</sup>K<sup>-1</sup>. Yb:KGW crystals exhibit a small quantum defect and it is possible to operate with a quantum defect well below ~4–5%.

# Yb:YAG crystals

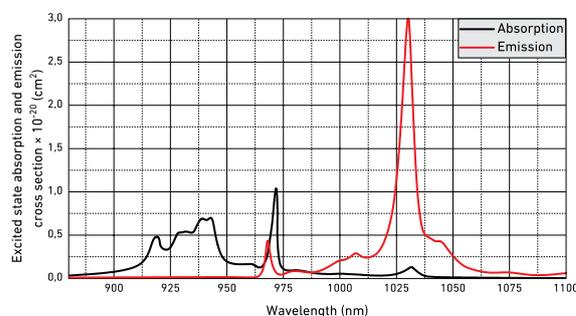

## Main features

- Simple electronic structure excludes excited-state absorption and also a variety of detrimental quenching processes
- Broad absorption band at 940 nm
- Long lifetime of the  $^2F_{5/2}$  ytterbium energy level
- Low quantum defect
- Custom crystals available upon request

## Application examples

- Material processing, micromachining, welding, cutting
- Efficient high power thin-disk lasers

Yb<sup>3+</sup>:YAG crystals feature a 950  $\mu$ s lifetime of the  $^2F_{5/2}$  ytterbium energy level and a quantum defect of only ~9%. Yb:YAG crystals also possess a broad pump band at near 940 nm that is more than 10 times broader than the 808 nm pump line of Nd:YAG crystals. It makes Yb:YAG systems less sensitive to thermal shift of pump diodes wavelength. Yb:YAG lasers emit typically at either 1030 nm (strongest line) or 1050 nm. It is often used in powerful and efficient thin-disk lasers.

## Standard specifications

# Yb:CaF<sub>2</sub> crystals

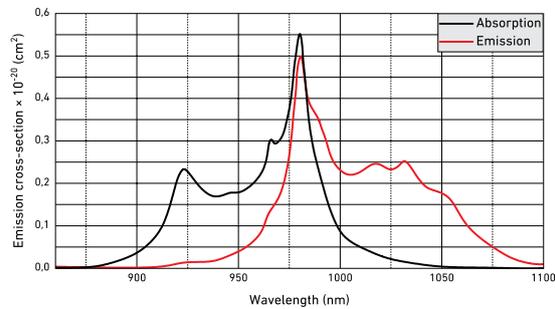

## Main features

- Isotropic crystal (cubic symmetry)
- Low quantum defect
- Long lifetime of the <sup>2</sup>F<sub>5/2</sub> ytterbium energy level
- Wide optical transmission
- Low dispersion behavior
- Limited nonlinear effects under intense laser irradiation
- Custom crystals available upon request

## Application examples

- Diode-pumped femtosecond solid-state lasers aiming at the generation of high-energy pulses
- Ultrashort pulses with high average power

Yb<sup>3+</sup>:CaF<sub>2</sub> are among most studied and promising crystals for the development of short-pulse, high-energy, high-power diode-pumped solid-state lasers. There are several reasons that explain this trend. Firstly, calcium fluoride is a simple cubic crystal whose crystallographic properties are fairly well known. Moreover, this crystal can be grown of large dimension and optical quality. The simple structure of this crystal contributes to its good thermal properties. Finally, Yb-doped calcium fluorides feature very broad and smooth emission bands, which is exceptional for cubic crystals.

# Yb:YAB crystals

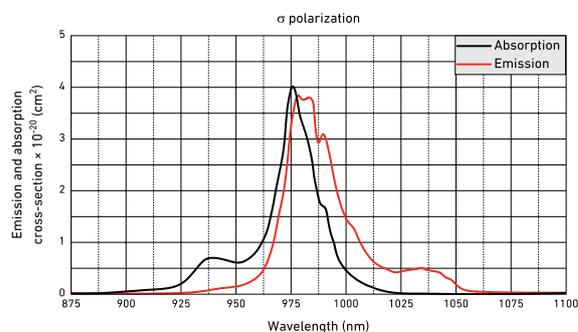

## Main features

- Self-doubling laser crystal
- High thermal conductivity
- Wide absorption bandwidth near 976 nm
- High absorption and emission cross-sections
- Low quantum defect
- Custom crystals available upon request

## Application examples

- High power CW lasers
- Mode-locked femtosecond lasers
- CW and mode-locked self-doubling lasers

Yb<sup>3+</sup>:YAB is one of the few representatives with multifunctional properties: as a negative uniaxial crystal, it also possesses nonlinear optical properties, permitting a direct conversion of the infrared radiation to the visible through second order nonlinear processes. High concentrations of Yb<sup>3+</sup> ions can be included in the YAB crystal matrix with little concentration quenching. Yb:YAB crystals feature good mechanical strength, good thermal conductivity, and stable chemical characteristics.

## Standard specifications

YB:YAB CRYSTALS	
Orientation	c-cut, a-cut available
Clear aperture	>90%
Face dimensions tolerance	+0,0/-0,1 mm
Length tolerance	±0,1 mm
Parallelism error	<20 arcsec
Perpendicularity error	<10 arcmin
Protective chamfers	<0,1 mm at 45°
Surface quality	20-10 S-D
Surface flatness	<λ/10@632,8 nm
Coatings	Antireflective (AR) coatings on both faces
Laser induced damage threshold	>10 J/cm <sup>2</sup> @1030 nm, 10 ns (for AR/AR@960-1060 nm coatings)
Mount	Unmounted

## Properties

# Yb:YAP crystals

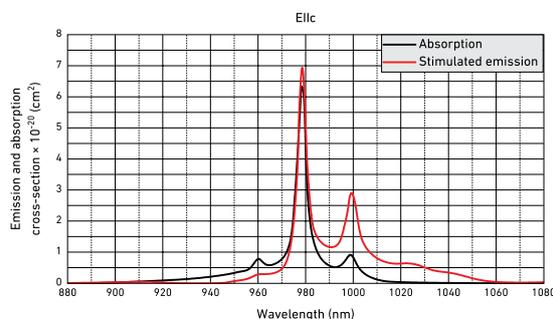

## Main features

- Biaxial orthorhombic crystal
- High absorption cross-section dependent upon the crystallographic orientation
- High thermal conductivity
- Low quantum defect
- Custom crystals available upon request

## Application examples

- Femtosecond lasers and regenerative amplifiers
- CW and passively mode-locked thin-disk lasers

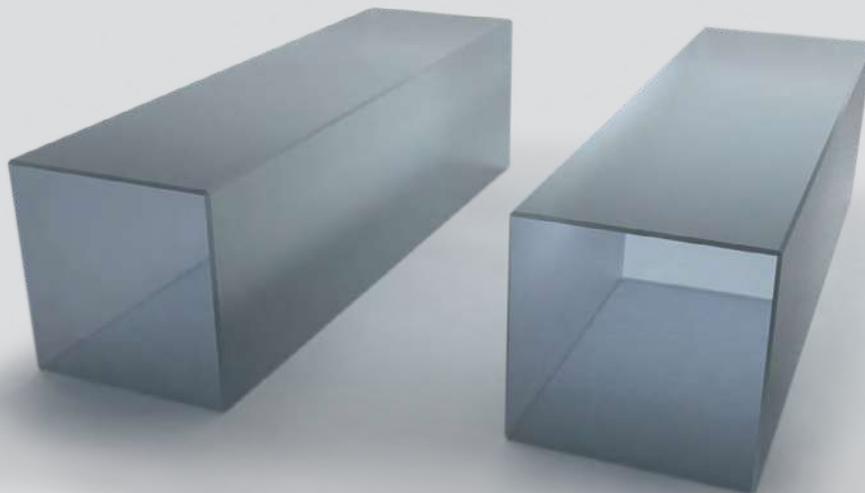

Yttrium aluminate doped with Yb<sup>3+</sup>, (Yb<sup>3+</sup>:YAP) is a biaxial orthorhombic crystal. YAP crystal hardness and thermal conductivity are similar to YAG but exhibits a highly anisotropic thermal expansion coefficient and is birefringent. Emission wavelengths are polarized, while emission and absorption cross-sections are strongly dependent upon the crystallographic orientation. The absorption cross-sections of the Yb:YAP crystal is higher than that of the Yb:YAG crystal.

## Properties

SPECTROSCOPIC AND THERMO-MECHANICAL PROPERTIES	
Absorption peak wavelength	978 nm
Absorption cross-section at peak	$6,6 \times 10^{-20} \text{ cm}^2$
Absorption bandwidth at peak wavelength	4 nm

# Yb:YVO<sub>4</sub> crystals

## Main features

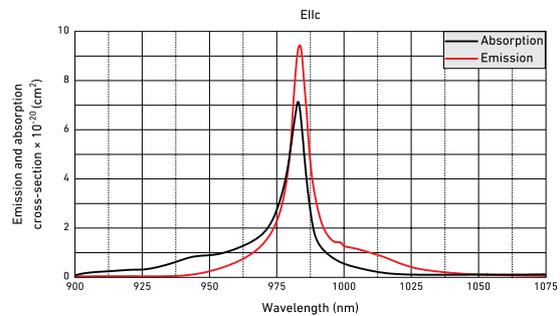

- The simple electronic structure excludes excited-state absorption and also a variety of detrimental quenching processes
- Broad and smooth emission spectrum
- Low quantum defect
- Custom crystals available upon request

## Application examples

- High power CW, Q-switched and mode-locked lasers
- Thin-disk lasers

Optogama does not provide standard product list. Please contact us for solutions and pricing.

Yb<sup>3+</sup>:YVO<sub>4</sub> crystal has a broad and smooth emission spectrum that allows wide wavelength tuning ranges and generating ultrashort pulses in mode-locked lasers. Due to good thermal conductivity Yb:YVO<sub>4</sub> crystals can be used as an active medium in high-power thin-disk lasers.

## Properties

SPECTROSCOPIC AND THERMO-MECHANICAL PROPERTIES	
Absorption peak wavelength	985 nm
Absorption cross-section at peak	$7,5 \times 10^{-20} \text{ cm}^2$
Absorption bandwidth at peak wavelength	5 nm

Typical doping level	1-3 at.%

# Er:KYW crystals

## Main features

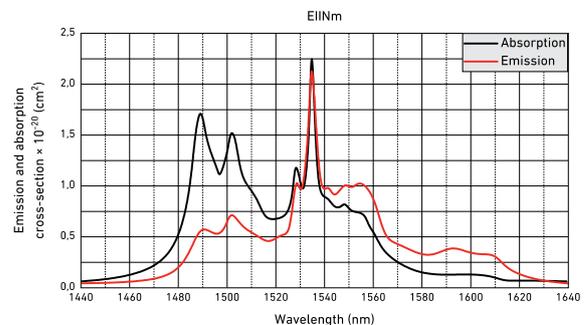

- Strong absorption bandwidth near 1534 nm corresponding to InGaAsP/ InP laser diode emission
- Wide emission bandwidth near 1600 nm
- Custom crystals available upon request

## Application examples

- In-band pumped "eye-safe" CW, Q-switched and mode-locked lasers
- In-band pumped "eye-safe" waveguide lasers

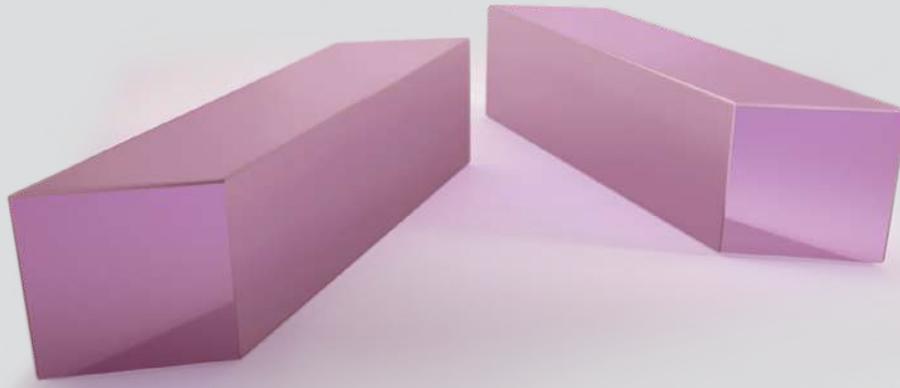

Optogama does not provide standard product list. Please contact us for solutions and pricing.

Er<sup>3+</sup>:KYW is a promising laser material for eye-safe emission at the wavelength of 1609 nm, which can be resonantly diode-pumped into the upper laser manifold at 1534 nm. Due to the low quantum defect high-slope efficiencies of >80% can be achieved with direct fiber laser or InGaAs/InP pumping. Because of a broad and smooth emission in the spectral range of 1570-1630 nm mode-locked "eye-safe" laser can be realized.

## Properties

SPECTROSCOPIC AND THERMO-MECHANICAL PROPERTIES	
Absorption peak wavelength	1534 nm
Absorption cross-section at peak	$2,4 \times 10^{-20} \text{ cm}^2$
Absorption bandwidth at peak wavelength	3 nm
Laser wavelength	1609 nm
Lifetime of <sup>4</sup> I <sub>13/2</sub> erbium energy level	3,1 ms
Emission cross-section @1609 nm	$0,4 \times 10^{-20} \text{ cm}^2$
Refractive index	$n_x = 2,05, n_y = 2,01, n_z = 1,97$
Crystal structure	Monoclinic
Density	6,5 g/cm <sup>3</sup>
Mohs hardness	4-5
Thermal conductivity	-3,5 Wm <sup>-1</sup> K <sup>-1</sup>
Typical doping level	<20 at. %

# Er:YAG crystals

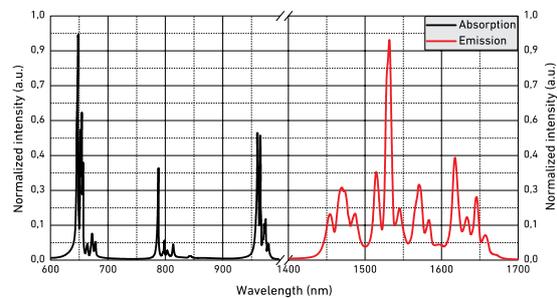

## Main features

- Isotropic crystal (cubic symmetry)
- High thermal conductivity
- Strong absorption bandwidth near 1470 nm corresponding to InGaAsP/InP laser diode emission
- Emission spectra at 1617 nm is free from absorption in the atmosphere
- Custom crystals available upon request

## Application examples

- CW and Q-switched eye-safe (~1,6 μm) in-band pumped lasers with nearly quantum defect limited efficiency for military applications including LIDAR, telemetry, or active imaging
- Channel waveguide eye-safe (~1,6 μm) in-band pumped lasers with diffraction-limited output for long-distance telemetry and ranging
- CW and Q-switched ~3 μm lasers for oral surgery, dentistry, implant dentistry, and otolaryngology

Er<sup>3+</sup>:YAG crystal is an attractive laser material for eye-safe emission at wavelengths of 1617 and 1645 nm which can be resonantly diode-pumped into the upper laser manifold at 1470 nm and 1532 nm. Due to the low quantum defect high slope efficiencies of >80% can be achieved with direct fiber laser or InGaAs/InP pumping. By using heavily erbium doped (~50 at.%) YAG crystal efficient CW laser operation at ~3 μm can be obtained.

# Er:YLF crystals

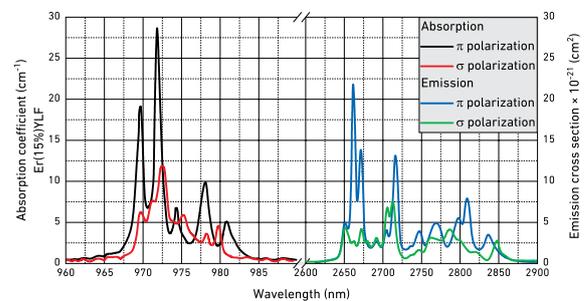

## Main features

- A low phonon frequency
- Long lifetimes of the laser emitting levels
- Wide transparency range (from the VUV to the 10  $\mu\text{m}$  region)
- Negative thermo-optic coefficient
- Custom crystals available upon request

## Application examples

- CW and Q-switched  $\sim 3 \mu\text{m}$  lasers for oral surgery, dentistry, implant dentistry, and otolaryngology
- Up-conversion visible lasers for display technology, medicine (diagnosis and treatment)

Er<sup>3+</sup>:YLF crystals are characterized by a low phonon frequency, which decreases the probability of non-radiative multi-phonon relaxations, therefore increases the luminescence quantum efficiency. Long lifetime of laser emitting levels allow higher energy storage, which is useful for the Q-switch lasing regime. High bandgap along with a low phonon energy leads to a very wide transparency range, which is possibly from VUV to 10  $\mu\text{m}$  region. Negative Er<sup>3+</sup>:YLF thermo-optic coefficient is an advantage since it reduces the thermal-lensing effect and improves beam shape as well as stability at high average pump power.

# Er, Yb:phosphate glass

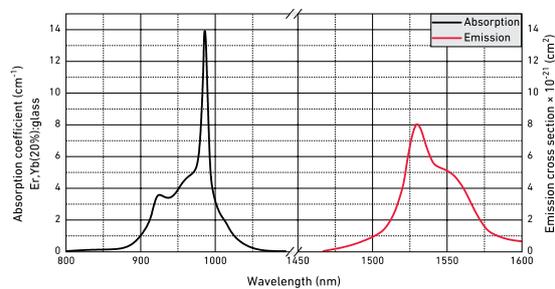

## Main features

- Long lifetime of the  $^4I_{13/2}$  erbium energy level
- High Yb to Er energy transfer efficiency
- High absorption and emission cross-sections
- Wide absorption and emission bandwidths
- Custom crystals available upon request

## Application examples

- Passively Q-switched lasers for laser rangefinders, LIDAR, and LIBS systems

Er<sup>3+</sup>, Yb<sup>3+</sup> co-doped phosphate glass (Er,Yb:phosphate glass) is a well-known and commonly used active medium for lasers emitting in the "eye-safe" spectral range of 1,5-1,6 μm. Phosphate glass combines a long lifetime (~8 ms) of  $^4I_{13/2}$  Er<sup>3+</sup> upper laser level with a low (2-3 ms) lifetime of  $^4I_{11/2}$  Er<sup>3+</sup> level that is in resonance with Yb<sup>3+</sup>  $^2F_{5/2}$  excited state. Fast non-radiative multiphonon relaxation from  $^4I_{11/2}$  to  $^4I_{13/2}$  level greatly decreases the back-energy transfer and up-conversion losses due to the interaction between Yb<sup>3+</sup> and Er<sup>3+</sup> ions, excited at the  $^2F_{5/2}$  and the  $^4I_{11/2}$  levels, respectively.

# Er, Yb:YAB crystals

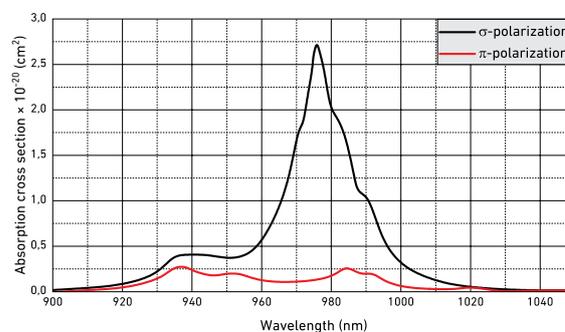

## Main features

- Uniaxial crystal with trigonal structure
- High thermal conductivity
- Wide absorption bandwidth near 976 nm
- High absorption and emission cross-sections
- Extremely high Yb<sup>3+</sup> to Er<sup>3+</sup> energy transfer efficiency

## Application examples

- High power eye-safe (~1,5 μm) CW lasers for metrology
- High-repetition rate passively Q-switched lasers for LIDAR and LIBS systems
- Ultrashort mode-locked lasers for telecom systems

Er<sup>3+</sup>, Yb<sup>3+</sup> co-doped yttrium-aluminum borate (Er, Yb:YAB) crystal is an alternative to commonly used Er,Yb:phosphate glass as an active medium of "eye-safe" (1,5-1,6 μm) lasers with a high average output power in CW and pulsed modes. It is characterized by high thermal conductivities of 7,7 Wm<sup>-1</sup>K<sup>-1</sup> and 6 Wm<sup>-1</sup>K<sup>-1</sup> along a-axis and c-axis, respectively.

It also features a highly effective Yb<sup>3+</sup> to Er<sup>3+</sup> energy transfer (~94%) and weak up conversion losses due to the very short lifetime of <sup>4</sup>I<sub>11/2</sub> excited state (~80 ns) facilitated by a high maximum phonon energy of the host material (hν<sub>max</sub> ~1500 cm<sup>-1</sup>). A strong and wide (~17 nm) absorption band is observed at 976 nm that coincides with the emission spectrum of InGaAs laser diodes.

# Tm:YLF crystals

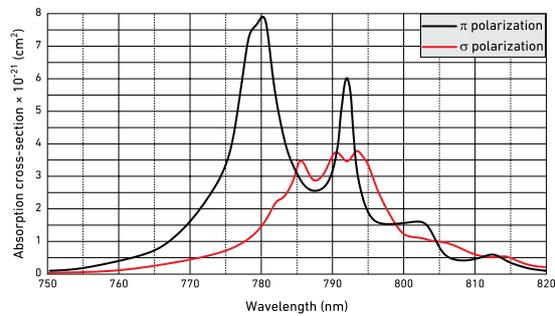

## Main features

- Strong absorption bands for laser diode pumping
- Weak thermal lensing
- High polarization purity
- Custom crystals available upon request

## Application examples

- LIDAR systems for remote sensing applications
- Pump source for Ho<sup>3+</sup>:YAG lasers

Tm<sup>3+</sup>:YLF crystal features high absorption peaks conveniently located for diode pumping around 792 nm and exhibits a cross-relaxation process, which creates two ions in the upper laser level for each pump photon absorbed. Tm<sup>3+</sup>:YLF lasers are ideal pump sources for Ho<sup>3+</sup>:YAG lasers. This is due to a good overlap of Tm<sup>3+</sup>:YLF emission and Ho<sup>3+</sup>:YAG absorption spectra and capacity of producing linearly polarized output. What is more, the refractive index of Tm<sup>3+</sup>:YLF decreases with temperature, leading to a negative thermal lens that is partly compensated by a positive lens effect due to end face bulging.

# Tm:KYW crystals

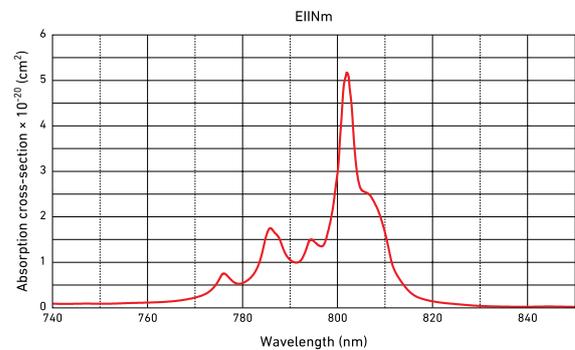

## Main features

- Broad fluorescence band
- Large emission cross-section
- Relatively low upper-level lifetime
- Custom crystals available upon request

## Application examples

- CW and Q-switched lasers emitting near 2  $\mu\text{m}$  for application in surgery, range finding and environmental monitoring
- 2  $\mu\text{m}$  wavelength region femtosecond lasers

Double tungstate crystals are optically biaxial and their optical properties have to be described within the frame of optical indicatrix axes ( $N_p$ ,  $N_m$  and  $N_g$ ). Advantages of Tm-doped KYW crystals include a broad fluorescence band, a large emission cross section and a relatively low upper level lifetime. Such combination of properties is very promising for generation of femtosecond pulses in solid-state laser systems.

## Standard specifications

TM:KYW CRYSTALS	
Orientation	$N_z$ -cut
Clear aperture	>90%
Face dimensions tolerance	+0,0/-0,1 mm
Length tolerance	$\pm 0,1$ mm
Parallelism error	<20 arcsec

# Passive Q-switch crystals

Passive Q-switch crystals (saturable absorbers) are used as laser resonator quality modulators in passively Q-switched lasers instead of electrically controlled modulators. Typically, these saturable absorbers are characterized by a low saturation fluence (saturation energy per unit area) and their use with converging beams

can further reduce the saturation energy (saturation fluence times beam area). Optogama develops and supplies different passive Q-switch crystal hosts and ion dopant combinations for research and industrial applications, therefore custom solutions are available upon request.

Mount	Unmounted

Cr<sup>4+</sup>:YAG crystals are ideal for passive Q-switch operation of Nd:YAG and other Nd<sup>3+</sup> or Yb<sup>3+</sup> doped laser crystals in the wavelength range of 900 nm to 1200 nm. Remarkable feature of Cr<sup>4+</sup>:YAG is the high damage threshold of >10 J/cm<sup>2</sup>@1064 nm, 10 ns. Its absorption band extends from 900 nm to 1200 nm and peaks around 1020 nm - 1070 nm with a very large absorption cross-section.

V:YAG is a relatively new saturable absorber. Passive Q-switch operation is available in the spectral range from 1064 nm to 1440 nm, primarily because of an extremely high ground state. These crystals can be used with active laser media such as Nd:YAG, Nd:YAP, Nd:KGW, Nd:YVO<sub>4</sub> and provide good lasing characteristics in passive Q-switched lasers. V:YAG features excellent optical, mechanical, and thermal properties and can be grown by Czochralski method.

# Co:Spinel crystals

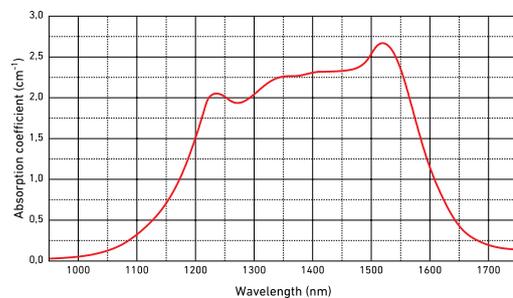

## Main features

- Low optical losses in the wavelength range of 1,3  $\mu\text{m}$  - 1,6  $\mu\text{m}$
- High laser induced damage threshold
- Custom crystals available upon request

## Application examples

- Passive Q-switch for Er:Glass lasers @1,54  $\mu\text{m}$

Co:Spinel is a recently developed material, which has been proven to be a very effective passive Q-switch in lasers emitting in the range of 1,2  $\mu\text{m}$  - 1,6  $\mu\text{m}$ . Co:Spinel has a high absorption cross-section, which permits Q-switch operation of Er:glass laser (both flash-lamp and diode-laser pumped) without an intracavity focusing. Negligible excited-state absorption results in a high contrast Q-switch operation, the ratio of initial (small signal) to saturated absorption is higher than 10.

## Standard specifications

Nonlinear optical crystals are used in many different nonlinear parametric applications. To mention a few: second harmonic generation, difference frequency generation, optical parametric amplification and others. A proper crystal has to be chosen in order to use it for a particular application. It should have transparency in the required spectral range, adequate birefringence for phase-matching, a high nonlinear co-

efficient, high optical damage threshold, and other properties. Contact Optogama team for assistance and custom solutions. Optogama develops and supplies different nonlinear crystals for fundamental, applied research and industrial applications. Available crystal growth techniques: Stepanov, Kyropoulos, Czochralski (CZ), temperature gradient technique (TGT), flux method.

# BBO crystals

## Main features

- Broad transparency range from 188 nm to 5,2 μm (reasonable transparency @3 μm - 5,2 μm for few tens μm thick crystals)
- Broad phase-matchable range for various second order nonlinear interactions over almost the entire transparency range
- Wide thermal acceptance bandwidth
- Highest nonlinearity of all UV nonlinear crystals
- High laser induced damage threshold
- Ultrathin crystals available for few optical cycle laser pulses
- Custom size, orientation and coatings are available upon request

## Application examples

- Harmonic generation (up to fifth) of pulsed Nd-doped crystal based lasers
- Frequency doubling, tripling of pulsed Ti:Sapphire, Yb-doped, dye lasers
- Widely tunable type I and II OPO
- Characterization of ultrashort laser pulses by FROG, XFROG, SPIDER, dispersion scan, chirp scan methods

BBO crystal transparency ranges from 188 nm to 5,2 μm, which includes reasonable transparency from 3 μm - 5,2 μm for few tens μm thick crystals, while their phase-matchable range spans almost over the entire transparency range. Combined with other magnificent properties of BBO, it is favorable for numerous nonlinear parametric applications, e.g. harmonic generation of pulsed Yb-doped crystal based lasers and frequency doubling, tripling of Ti:Sapphire lasers, widely tunable type I and II OPO. It is worth to mention that BBO crystals have the highest nonlinearity in the UV range out of all common nonlinear crystals.

## Standard specifications

BBO CRYSTALS	
Orientation accuracy	<30 arcmin
Clear aperture	>90%
Face dimensions tolerance	+0,0/-0,1 mm
Parallelism error	<20 arcsec
Perpendicularity error	<5 arcmin
Protective chamfers	<0,1 mm at 45°
Surface quality	10-5 S-D
Wavefront distortion	<λ/8@632,8 nm
Coatings	Low dispersion protective coatings or antireflective coatings on both sides
Laser induced damage threshold	>500 MW/cm <sup>2</sup> @1064 nm, 10 ns
UVFS support	Crystals with <0,1 mm thickness are optically contacted to 0,5-1 mm UVFS support
Mount	Mounted in ø25,4 mm black or natural aluminum mount

## Properties

PHYSICAL AND OPTICAL PROPERTIES	
Chemical formula	β-BaB <sub>2</sub> O <sub>6</sub>
Crystal structure	Rhombohedral, 3m
Lattice parameters	a=12,532 Å, c=12,717 Å
Optical symmetry	Negative uniaxial (n <sub>o</sub> >n <sub>e</sub> )
Density	3,85 g/cm <sup>3</sup>
Mohs hardness	4-4,5
Transparency range	188 nm - 5,2 μm, reasonable from 3 μm to 5,2 μm for thin crystals (few tens of μm)
Sellmeier equations @188 nm - 5,2 μm range (λ in μm)	$n_o^2 = 1 + 0,90291 \lambda^2 / (\lambda^2 - 0,003926) + 0,83155 \lambda^2 / (\lambda^2 - 0,018786) + 0,76536 \lambda^2 / (\lambda^2 - 60,01)$ $n_e^2 = 1 + 1,151075 \lambda^2 / (\lambda^2 - 0,007142) + 0,21803 \lambda^2 / (\lambda^2 - 0,02259) + 0,656 \lambda^2 / (\lambda^2 - 263)$
Refractive indices	n <sub>o</sub> = 1,6551, n <sub>e</sub> = 1,5426 @1064 nm

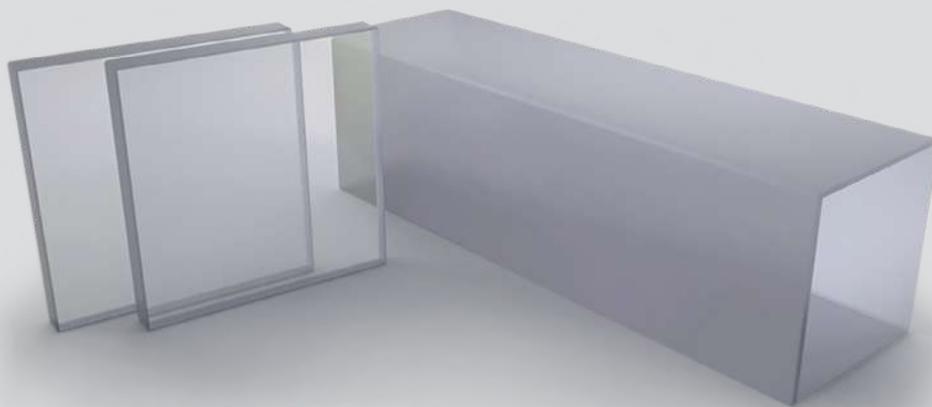

## Guidance

Optogama provide guidance and theoretical calculations for particular BBO applications. Contact us and we will help you to configure your crystal.

# LBO crystals

## Main features

- Broad transparency range from 155 nm to 3200 nm
- Absence of photochromic damage (gray-tracking)
- Highest damage threshold among common nonlinear crystals
- Small walk-off angle at room temperature, no walk-off at NCPM regime
- Wide acceptance angle
- Temperature tunable type I and II non-critical phase-matching
- Custom size, orientation and coatings are available upon

## Application examples

- Sum-frequency generation of 532 nm and 1064 nm to produce 355 nm UV radiation
- Widely tunable OPOs in NIR range pumped by second harmonic of Nd-doped lasers
- Efficient second harmonic generation at 1064 nm without walk-off effect (NCPM,  $t = 149^\circ\text{C}$ )

Lithium Triborate (LiB<sub>3</sub>O<sub>5</sub>, LBO) crystals feature a broad transparency range, wide acceptance angle, small walk-off angle and the highest damage threshold among common nonlinear crystals. Most common applications include high-power near-infrared wavelength second harmonic generation, sum frequency generation to produce visible, ultraviolet laser light and visible, near-infrared widely tuned optical parametric oscillators.

## Standard specifications

LBO CRYSTALS	
Orientation accuracy	<30 arcmin
Clear aperture	>90%
Face dimensions tolerance	+0,0/-0,1 mm
Length tolerance	±0,1 mm
Parallelism error	<20 arcsec
Perpendicularity error	<10 arcmin
Protective chamfers	<0,1 mm at 45°
Surface quality	10-5 S-D
Wavefront distortion	<N/4@632,8 nm
Coatings	AR coatings on both sides
Laser induced damage threshold	>1 GW/cm <sup>2</sup> @1064 nm, 10 ns
Mount	Unmounted

## Properties

# KTP crystals

## Main features

- High nonlinearity
- Nonhygroscopic crystal
- Great mechanical stability
- Wide transparency range from 350 nm to 4,5 μm
- Broad angular and thermal acceptance
- Broad type I and II non-critical phase-matching range

## Application examples

- Low and medium power frequency doubling of Nd-doped lasers
- KTP OPO and ZGP OPO tandem for mid-infrared generation

Potassium titanyl phosphate (KTiOPO<sub>4</sub>, KTP) crystals are advantageous due to their high nonlinearity, great mechanical stability, high optical quality and transparency range of 350 nm - 4,5 μm. These features determine the wide application of KTP crystals as a nonlinear medium.

It is an excellent solution for frequency doubling applications of Nd-doped lasers, especially for low and medium power applications, both intra- and extra-cavity design.

Besides, these crystals can be used as a nonlinear OPO medium for IR generation up to 4 μm and used as a pump source for mid-IR nonlinear crystal based optical parametric oscillators, such as ZGP OPO. KTP is susceptible to photochromic damage (grey-tracking), which causes deterioration of nonlinear conversion efficiency. Optogama provide high grey track resistance (HGTR) KTP crystals as a solution, which significantly improves the grey-track resistance and overall performance. HGTR KTP crystals extend the use of KTP as a nonlinear medium to high-power applications.

Please request in case you need HGTR KTP crystals for your applications.

# KDP, DKDP crystals

## Main features

- Excellent ultraviolet radiation transmission
- High laser induced damage threshold
- Custom crystals available upon request

## Application examples

- Frequency doublers, triplers and quadruplers for Nd-doped lasers
- Q-switches for Ti:Sapphire, Alexandrite, Nd-doped lasers

Potassium dihydrogen phosphate ( $\text{KH}_2\text{PO}_4$ , KDP) and potassium dideuterium phosphate ( $\text{KD}_2\text{PO}_4$ , DKDP) crystals are one of the oldest used nonlinear materials. DKDP and KDP are known as analogs, though their properties differ due to DKDP deuteration. They both exhibit excellent ultraviolet transmission and high damage threshold. The nonlinearity of these crystals is relatively low, but these crystals can be grown in large size. They found their application as nonlinear frequency doublers, triplers and quadruplers of Nd-doped lasers and as Q-switch devices for Ti:Sapphire, Alexandrite, Nd-doped lasers. Main drawback is that these crystals are highly hygroscopic, therefore sealed housing and dry operating conditions must be ensured.

## Standard specifications

KDP, DKDP CRYSTALS	
Orientation accuracy	<30 arcmin

# Lithium niobate crystals

## Main features

- Broad transparency region from 420 nm to 5200 nm
- High nonlinear, electro-optic and acousto-optic coefficients
- Nonhygroscopic, mechanically, and chemically stable

## Application examples

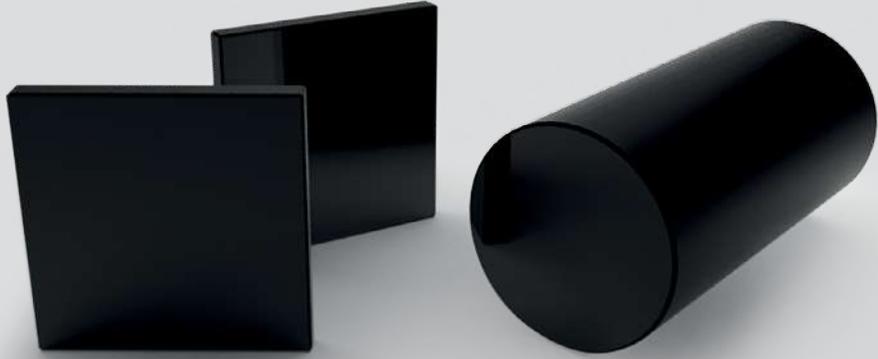

- Electro-optic modulation and Q-switching
- Optical parametric oscillators (OPO) pumped at 1064 nm
- Quasi-phase-matched devices with periodically poled lithium niobate (PPLN)

Optogama does not provide standard product list. Please contact us for solutions and pricing.

Lithium niobate ( $\text{LiNbO}_3$ , LN) is a multi-purpose material in photonics and optoelectronics fields. It features a wide transparency range from 420 nm to 5,2  $\mu\text{m}$ , excellent nonlinear, electro-optic, and piezoelectric properties. Most common applications include infrared range optical modulation and Q-switching, nonlinear frequency conversion of  $>1 \mu\text{m}$  wavelengths. Their electrical and optical properties can be adjusted using magnesium or zirconium dopants.

## Properties

PHYSICAL AND OPTICAL PROPERTIES	
Chemical formula	$\text{LiNbO}_3$
Crystal structure	Trigonal, 3m
Optical symmetry	Negative uniaxial ( $n_o > n_e$ )
Density	4,64 g/cm <sup>3</sup>
Mohs hardness	5
Transparency range	420 nm - 5,2 $\mu\text{m}$
Sellmeier equations ( $\lambda$ in $\mu\text{m}$ )	$n_o^2 = 4,9048 + 0,11768/\lambda^2 - 0,04750 - 0,027169 \lambda^2$ $n_e^2 = 4,5820 + 0,099169/\lambda^2 - 0,04443 - 0,021950 \lambda^2$
Refractive indices	$n_o = 2,220$ ; $n_e = 2,146$ @1064 nm

# CdSe crystals

## Main features

- Wide transparency range (0,7-24  $\mu\text{m}$ )
- Reasonably large nonlinearity
- Small walk-off angle

## Application examples

- Far infrared wavelength radiation generation by DFG, OPO methods
- Material for infrared optical elements: substrates, polarizers, waveplates, etc.

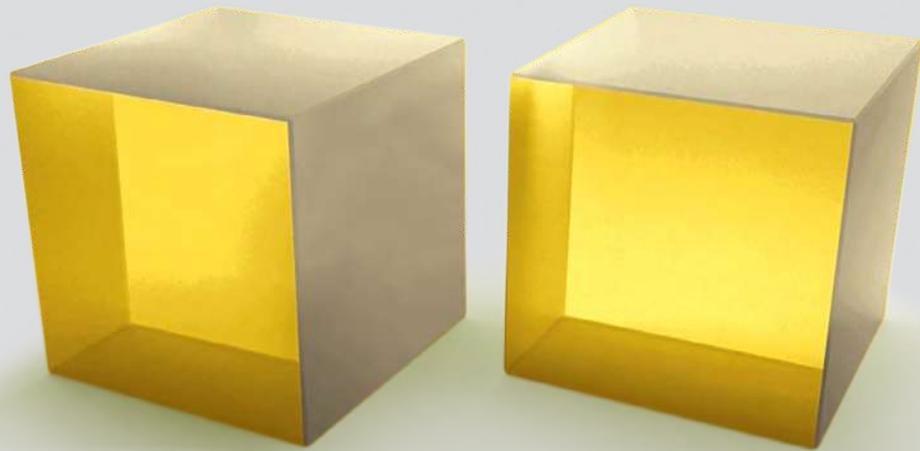

Optogama does not provide standard product list. Please contact us for solutions and pricing.

Cadmium selenide (CdSe) crystals feature an infrared transmission up to 24  $\mu\text{m}$ , reasonably large nonlinearity and small walk-off angle. CdSe crystals can be employed into difference frequency generation (DFG), optical parametric oscillation (OPO) schemes to generate infrared laser radiation above ZGP absorption edge ( $>12 \mu\text{m}$ ). For instance, CdSe OPO can potentially be pumped by 2  $\mu\text{m}$  Tm-doped, Ho-doped, Tm and Ho co-doped lasers and produce far infrared idler radiation. Besides nonlinear optic applications cadmium selenide crystal material can be used for IR optical elements: substrates, polarizers, waveplates and other.

## Properties

# AgGaS<sub>2</sub> crystals

## Main features

- Unique non-linear properties across the transmission range from 0,5 μm to 12 μm
- Low optical absorption and scattering
- Transparency at short wavelengths

## Application examples

- Frequency mixing in the middle IR region up to ~12 μm
- Second harmonic generation and up-conversion for CO<sub>2</sub> lasers
- Tunable OPO for solid-state lasers

Silver Thiogallate (AgGaS<sub>2</sub>, AGS) has been demonstrated as an efficient crystal for nonlinear parametric applications in the infrared spectral range. Its transparency region spans from 0,53 μm to 12 μm. AGS based optical parametric oscillators feature continuously tunable radiation over a wide range of wavelengths in the infrared spectral range. High transparency in the short wavelength range beginning at 550 nm is used in OPOs pumped by Nd:YAG laser.

Using 2050 nm pump laser, an optimally designed AgGaS<sub>2</sub> OPO is tunable from about 2.5 to 12.0 μm. The output range can be extended by the sum or difference frequency mixing (SFM/DFM). AGS crystal features high non-linear coefficient, high damage threshold, low optical absorption and scattering.

## Standard specifications

AgGaS <sub>2</sub> CRYSTALS	
Orientation accuracy	<30 arcmin

# AgGaSe<sub>2</sub> crystals

## Main features

- Excellent properties across the transmission range from 0,73 to 18  $\mu\text{m}$
- Low optical absorption and scattering
- High FOM (figure of merit) for non-linear interactions in NIR and MIR

## Application examples

- Frequency mixing in the IR region  $\sim 18,3 \mu\text{m}$
- Second harmonic generation and up-conversion for CO<sub>2</sub> lasers
- Tunable OPO for solid-state lasers

Silver gallium selenide (AgGaSe<sub>2</sub>, AGSe) is an optically negative uniaxial crystal with a reasonable transmittance over  $\sim 0,7 \mu\text{m} - 18 \mu\text{m}$  region. AGSe crystals have proven to be used in nonlinear parametric downconversion (difference frequency generation, DFG) in the Mid-IR range by tandem with commercially available synchronously-pumped optical parametric oscillators (SPOPOs) in the femtosecond and picosecond regime. AGSe crystal has high figure of merit ( $\sim 70 \text{ pm}^2/\text{V}^2$ ,  $n \sim 2,6$ ), which is six times larger than counterpart AGS. For some reasons AGSe is also a better choice over other mid-IR crystals. For example, even though GaSe has higher nonlinearity and comparable transparency region, AGSe has lower spatial walk-off and availability to be processed for particular application (growth and cut direction, dielectric thin-film coatings). ZGP has higher figure of merit, but its transparency region ( $\sim 2-12 \mu\text{m}$ ) is no match to AGSe.

## Standard specifications

AgGaSe <sub>2</sub> CRYSTALS	
Orientation accuracy	<30 arcmin
Clear aperture	>80%
Face dimensions tolerance	+0,0/-0,2 mm
Parallelism error	<30 arcsec
Perpendicularity error	<10 arcmin
Protective chamfers	<0,2 mm at 45°
Surface quality	60-40 S-D
Coatings	BBAR/BBAR@1,7-2,7 $\mu\text{m}$ /5-18 $\mu\text{m}$
Mount	Unmounted

## Properties

PHYSICAL AND OPTICAL PROPERTIES	
Chemical formula	AgGaSe <sub>2</sub>
Crystal structure	Tetragonal, 42m
Lattice parameters	a = 5,9920 Å, c = 10,8803 Å
Optical symmetry	Negative uniaxial ( $n_o > n_e$ , $\lambda < 804 \text{ nm}$ , $n_o > n_e$ )
Density	5,7 g/cm <sup>3</sup>
Mohs hardness	3-3,5
Transparency range	0,71 - 19 $\mu\text{m}$ @'0' transmittance level
Sellmeier equations @T=293 K ( $\lambda$ in $\mu\text{m}$ )	$n_o^2 = 6,8507 + 0,4297/(\lambda^2 - 0,1584) - 0,00125 \lambda^2$ $n_e^2 = 6,6792 + 0,4598/(\lambda^2 - 0,2122) - 0,00126 \lambda^2$
Refractive indices	$n_o = 2,5917$ ; $n_e = 2,5585$ @10,5 $\mu\text{m}$
Thermal conductivity @T = 293 K	1 (llc) Wm <sup>-1</sup> K <sup>-1</sup> , 1,1 (Lc) Wm <sup>-1</sup> K <sup>-1</sup>

# ZnGeP<sub>2</sub> crystals

## Main features

- The transmission range spans from 0,74 μm to 12 μm
- High nonlinearity (75 pm/V)
- High thermal conductivity (35 W/mK)
- Nominal absorption coefficient <0,04 cm<sup>-1</sup> at ~2,1 μm for o-wave

## Application examples

- Mid-IR OPOs pumped at ~2,1 μm
- Generation of terahertz range frequencies

Zinc Germanium Phosphide (ZnGeP<sub>2</sub>, ZGP) crystals feature a combination of high nonlinearity, high thermal conductivity and a wide transmission range from 0,74 to 12 μm. These crystals gained credit for their role of ~2,1 μm pumped optical parametric oscillators (OPOs) spanning the spectral range from 2 to 8 μm.

## Standard specifications

ZnGeP <sub>2</sub> CRYSTALS	
Orientation accuracy	<30 arcmin
Clear aperture	>80%
Face dimensions tolerance	+0,0/-0,2 mm
Length tolerance	+1,0/-0,0 mm
Parallelism error	<30 arcsec
Perpendicularity error	<10 arcmin
Protective chamfers	<0,2 mm at 45°
Surface quality	60-40 S-D
Surface flatness	λ/4@632,8 nm
Coatings	Antireflective coatings @2,1 μm + 3,5-5 μm on both sides
Nominal absorption coefficient	≤0,04 cm <sup>-1</sup> @2,1 μm, o-wave
Mount	Unmounted

## Properties

PHYSICAL AND OPTICAL PROPERTIES	
Chemical formula	ZnGeP <sub>2</sub>
Crystal structure	Tetragonal, 42m
Lattice parameters	a = 5,465 Å, c = 10,708 Å

# GaSe crystals

## Main features

- Broad transparency range from 0,65  $\mu\text{m}$  to 18  $\mu\text{m}$
- Large nonlinearity and birefringence
- Soft and cleaves along [001] plane
- Cannot be cut and polished at certain angles
- Comes uncoated and mounted for proper handling

## Application examples

- Broadband mid-IR difference frequency generation
- Second harmonic (SH) of  $\text{CO}_2$ , CO, dye lasers
- Terahertz (THz) generation by optical rectification
- Terahertz detectors for terahertz time domain spectroscopy (THz-TDS)

Optogama offer z-cut, cleaved surface and mounted gallium selenide (GaSe) crystals. Custom clear apertures and crystal thicknesses from tens of microns up to several millimeters are available upon request. Due to fragile nature of GaSe it is not possible to apply antireflection coatings.

## Standard specifications

GaSe crystals	
Clear aperture	$\geq \varnothing 7$ mm or custom
Surface quality	Cleaved surfaces
Coatings	Uncoated, unavailable
Mount	$\varnothing 25,4$ mm black anodized aluminum mount

## Properties

PHYSICAL AND OPTICAL PROPERTIES	
Chemical formula	GaSe
Crystal structure	Hexagonal, -62m
Lattice parameters	$A = 3,742 \text{ \AA}$ , $c = 15,918 \text{ \AA}$
Optical symmetry	Negative uniaxial (no>ne)
Density	5,03 g/cm <sup>3</sup>
Mohs hardness	$\approx 0$
Transparency range	0,62-20 $\mu\text{m}$ @ "0" transmittance level
Sellmeir equations	$n_o^2 = 7,443 + 0,4050/\lambda^2 + 0,0186/\lambda^4 + 0,0061/\lambda^6 + 3,1485 \lambda^2/(\lambda^2 - 2194)$ ; $n_e^2 = 5,76 + 0,3879/\lambda^2 - 0,2288/\lambda^4 + 0,1223/\lambda^6 + 1,8550 \lambda^2/(\lambda^2 - 1780)$
Refractive indices	$n_o = 2,8158$ ; $n_e = 2,4392$ @10,6 $\mu\text{m}$

Inelastic photon-phonon-interaction in Raman crystals gives rise to Stokes or anti-Stokes shift of pump radiation. It is the so-called Stimulated Raman scattering (SRS). This is a versatile method for frequency conversion, which does not need to be phase-matched, features a high conversion efficiency and is easily compatible with current solid-state lasers. Suchlike Raman generator emission lines can cover

the wavelength range from UV to NIR due to cascaded SRS. For a selective Raman shift line amplification, the Raman crystal has to be placed into a resonator with an appropriate optical feedback.

Optogama provide barium nitrate and undoped KGW, KYW Raman crystals. Do not hesitate to request custom, if desired crystals are not present in the standard list.

# Raman crystal

# an als

Barium nitrate  
crystals

KGW crystals

KYW crystals

# Barium nitrate crystals

## Main features

- Transparency range from 350 nm to 1800 nm
- Raman frequency shift of 1048 cm<sup>-1</sup>
- Excellent Raman shifter for nanosecond applications
- Custom crystal dimensions and coatings available upon request

## Application examples

- External cavity Raman laser pumped by commercially available passively Q-switched nanosecond Nd:YAG laser
- Generation of 1,59 μm "eye-safe" radiation, which coincides with CO<sub>2</sub> absorption line

Barium nitrate (Ba(NO<sub>3</sub>)<sub>2</sub>) is one of the leading crystals among solid-state Raman shifters in terms of Raman gain coefficient, which is known to be the highest at nanosecond steady-state regime ( $g_R = 47 \text{ cm/GW@532 nm}$  pump). Barium nitrate also features a moderately broad transparency range (0,33 μm - 1,8 μm) and high damage threshold. Drawbacks of barium nitrate crystal are low thermal conductivity (1,17 Wm<sup>-1</sup>K<sup>-1</sup>) and high thermo-optic coefficient ( $dn/dT = -20 \times 10^{-6} \text{K}^{-1}$ ), which lead to the thermal lensing effect. The crystal is soft and hygroscopic, therefore should be treated with caution. Optogama recommend using barium nitrate as a Raman shifter for nanosecond applications.

## Standard specifications

BARIUM NITRATE CRYSTALS	
Orientation	[110]
Clear aperture	>85%
Face dimensions tolerance	±0,5 mm

# KGW crystals

## Main features

- Broad transparency range from 300 nm to 5  $\mu\text{m}$
- Two pump polarization-dependent Raman shifts at 768  $\text{cm}^{-1}$  and 901  $\text{cm}^{-1}$
- Excellent Raman shifter for picosecond applications
- Custom dimensions, orientation, and coatings available upon request

## Application examples

- Raman generator pumped by commercially available picosecond Nd:YAG laser

Potassium gadolinium tungstate ( $\text{KGd}(\text{WO}_4)_2$ , KGW) crystals feature good mechanical properties, relatively good thermal conductivity ( $2,5\text{-}3,4 \text{ Wm}^{-1}\text{K}^{-1}$ ) and wide transparency range, which spans from 350 nm to 5  $\mu\text{m}$ . KGW as a Raman crystal features two large Raman modes at 768  $\text{cm}^{-1}$  and 901  $\text{cm}^{-1}$ , which are pump polarization dependent. Optogama recommend using KGW crystal as a Raman shifter for picosecond applications.

# Photo fracti cryst

Optogama provide BSO, Fe:LiNbO<sub>3</sub>, SBN and BGO crystals not mainly, but necessarily for applications, which exploit photorefractive effect. Photorefractive effect is a phenomenon whereby the local index of refraction is modified by spatial variations of light intensity. It is observed when coherent light interferes with

each other in photorefractive material, which forms a spatially varying pattern of illumination. The effect can be used to store temporary, erasable holograms, also known as holographic data storage. It can also be used to create phase-conjugate mirrors or optical spatial solitons.

# ore- ive als

BSO crystals

Fe:LiNbO<sub>3</sub> crystals

SBN crystals

BGO crystals

# BSO crystals

## Main features

- High electro-optic coefficient ( $r_{41} = 5 \text{ pm/V}$ )
- High phase-conjugation efficiency
- Available in large size elements or wafers up to 3"
- Customization available upon request

## Application examples

- Spatial light modulators
- Optical switches
- Pockels readout optical memory (PROM) applications
- Optical waveguides

Bismuth silicon oxide ( $\text{Bi}_{12}\text{SiO}_{20}$ , BSO) crystals are highly efficient photoconductors with a low dark conductivity, that allows a build-up of large photo-induced space-charges. Tremendous photoconductivity and electro-optic properties make BSO crystals attractive in a range of applications: spatial light modulators, optical switches, phase conjugation mixers. BSO crystals are grown by modified Czochralski method and available in up to 3" diameter aperture size. Crystals can be supplied with ITO coatings on request.

## Standard specifications

# Fe:LiNbO<sub>3</sub> crystals

## Main features

- High electro-optic coefficient ( $r_{41} = 5 \text{ pm/V}$ )
- High phase conjugation efficiency
- Available in large size elements or wafers up to 3"
- Customization available upon request

## Application examples

- Spatial light modulators
- Optical switches
- Holographic recording
- Optical waveguides

Lithium niobate (LiNbO<sub>3</sub>, LN) crystal doped with iron (Fe:LiNbO<sub>3</sub>) is an attractive photorefractive material, due to the high photorefractive sensitivity, high electro-optic coefficients and diffraction efficiency, chemo-mechanical properties. Fe:LiNbO<sub>3</sub> crystals are grown by Czochralsky method and available in large size. Wide range of available dopants and levels enable to adjust material properties for particular applications. What is more, Fe:LiNbO<sub>3</sub> crystals are easy to handle, low cost, therefore suitable for volume production.

## Standard specifications

FE:LiNbO <sub>3</sub> CRYSTALS	
Dopant level, Fe <sub>2</sub> O <sub>3</sub>	0.02 mol. % 0.03 mol. % 0.05 mol. % 0.1 mol. %
Orientation	90° cut (X-cut, Y-cut)
Clear aperture	85%
Face dimensions tolerance	+0/-0.2 mm
Thickness tolerance	±0.2 mm
Parallelism error	<3 arcmin
Protective chamfers	<0.3 mm at 45°
Surface quality	20-10 S-D
Wavefront distortion	<λ/4@632.8 nm
Coatings	None, antireflective or indium tin oxide coatings available upon request
Electrodes	None, available upon request
Mount	Unmounted

## Properties

MAIN PROPERTIES	
Chemical formula	Fe:LiNbO <sub>3</sub>
Crystal structure	Trigonal, 3m
Density	4,64 g/cm <sup>3</sup>
Mohs hardness	5
Transmission range	0,35-5,5 μm
Refractive index @0.63 μm	$n_o = 2,20$ $n_e = 2,29$

# SBN crystals

## Main features

- Pure or doped with Ce
- Efficient phase-conjugation
- Custom size, doping level, unpoled, antireflective coated and electrodeless crystals are available upon request

## Application examples

- Optical information recording
- Pyroelectrical detectors
- Self-pumped self-conjugation mirror
- Optical correlators

Strontium-barium niobate ( $\text{Sr}_x\text{Ba}_{1-x}\text{Nb}_2\text{O}_6$ , SBN:x,  $x = 61$ ) crystals feature excellent optical and photorefractive properties. They are available nominally pure or doped with Ce. Different composition SBN crystals found their application in electro-optics, acousto-optics, photorefractive, non-linear optics fields. Optogama provide inclusion-free and homogenous SBN crystals, which are grown by Modified Stepanov method and available with linear dimensions up to 40 mm.

## Standard specifications

SBN:61 CRYSTALS	
Orientation	Short edge along tetragonal axis
Poling	Poled or unpoled
Electrodes	Carbon-water electrodes or no electrodes
Clear aperture	85%
Face dimensions tolerance	+0/-0,2 mm
Thickness tolerance	±0,2 mm
Parallelism error	<30 arcsec
Protective chamfers	<0,1 mm at 45°
Surface quality	40-20 S-D over clear aperture, 80-50 S-D other surfaces
Surface flatness	<λ/4@632,8 nm
Coatings	Uncoated
Mount	Unmounted

## Properties

MAIN PROPERTIES	
Composition	SBN:61
Crystal structure	Tetragonal, 4 mm
Lattice parameters	$a = 12,46 \text{ \AA}$ , $c = 3,946 \text{ \AA}$

# Coated laser components

Optogama provides dielectric thin-film and metal-coated laser components for use in the ultraviolet, visible, and infrared wavelength ranges. Non-standard components are available upon request. Contact us for custom solutions and pricing. Optogama standard dielectric thin-film coated mirrors are designed for laser-line, broadband, multi-wavelength and beam-splitting or combining applications. Standard dielectric thin-film optical elements also include laser cavity output couplers

and variable reflectivity mirrors, which are primarily used as output mirrors for stable and unstable laser resonators, respectively. Metal-coated mirrors are an excellent choice for applications, where uniform, broadband, low GDD, nearly angle of incidence insensitive reflectance is required. Optogama provide standard flat and curved metal-coated mirrors with the following metal-coatings: UV enhanced aluminum, protected aluminum, protected silver, enhanced silver and protected gold.

## Main features

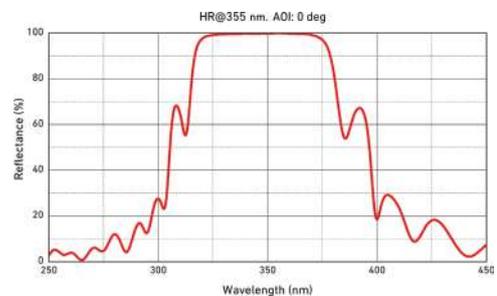

- Mirror substrates fabricated from high-quality UV grade fused silica
- Standard substrate dimensions are  $\varnothing 25,4 \times 5$  mm
- $0^\circ$  or  $45^\circ$  angle of incidence selection
- Designed for a high reflectance over a certain spectral range and angle of incidence
- Custom coatings, substrate material and dimensions are available upon request

## Application examples

- Nearly loss-free light steering and folding in laser-based systems

## Standard specifications

LASER LINE MIRRORS	
Substrate material	UV grade fused silica
Clear aperture	>85%
Face dimensions tolerance	+0/-0,15 mm
Thickness tolerance	$\pm 0,25$ mm
Parallelism error	<30 arcsec
Protective chamfers	<0,35 mm at $45^\circ$
Surface quality	20-10 S-D
Surface flatness	$< \lambda/8 @ 632,8$ nm
Laser induced damage threshold	$>12$ J/cm <sup>2</sup> @1064 nm, 10 ns (for 1020-1070 nm mirrors)

Laser line mirrors exhibit high reflectance over a particular spectral range, extending <10% of the central wavelength, at a specific angle of incidence and polarization for non-normal incidence. Reflectance properties are based on the optical interference phenomena of reflections from multiple dielectric thin-film layers, which are carefully deposited on UV grade fused silica optical substrates.

# Broadband laser mirrors

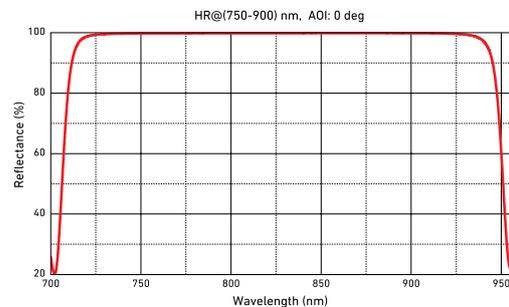

## Main features

- Mirror substrates fabricated from high-quality UV grade fused silica
- Standard substrate dimensions are  $\varnothing 25,4 \times 5$  mm
- Designed for a high reflectance (>99%) over a broad wavelength range
- 0° or 45° angle of incidence selection
- Custom coatings, substrate material and dimensions are available upon request

## Application examples

- High reflectivity mirrors for tunable and broadband laser sources
- Broadband light beam steering and folding

Broadband laser mirrors provide high average reflectance over a broad spectral range at a specific angle of incidence and polarization for non-normal incidence. These properties are based on the optical interference phenomena of reflections from multiple dielectric thin-film layers, which are carefully deposited on UV grade fused silica optical substrates.

## Standard specifications

BROADBAND LASER MIRRORS

# Variable reflectivity mirrors

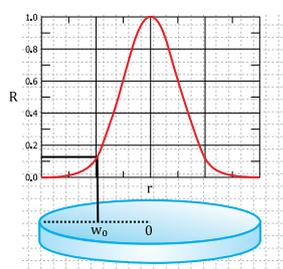

## Main features

- Mirror substrates fabricated from high-quality UV grade fused silica
- Standard substrate dimensions are ø25,4 x 5 mm
- Central reflectance from 15% to 35% at 1064 nm wavelength
- Custom reflectance profiles, substrates material and dimensions are available upon request

## Application examples

- Laser cavity output coupler for unstable laser resonator

Optogama variable reflectivity mirrors provide a circularly symmetric reflectance profile according to the super-Gaussian function with order of 2. These mirrors are favorable in high-power unstable laser resonators for their wide filling of the active medium and weak diffraction on hard-edge aperture. Therefore, super-Gaussian variable reflectivity mirrors contribute to better near- and far-field beam quality. It is worth to mention that variable reflectivity mirrors can be designed to have various reflectance profiles, such as linear, parabolic, Gaussian.

Function of reflection:

$$R = R_0 \times \exp \left[ -2 \left( \frac{r}{w_0} \right)^n \right]$$

Herewith:

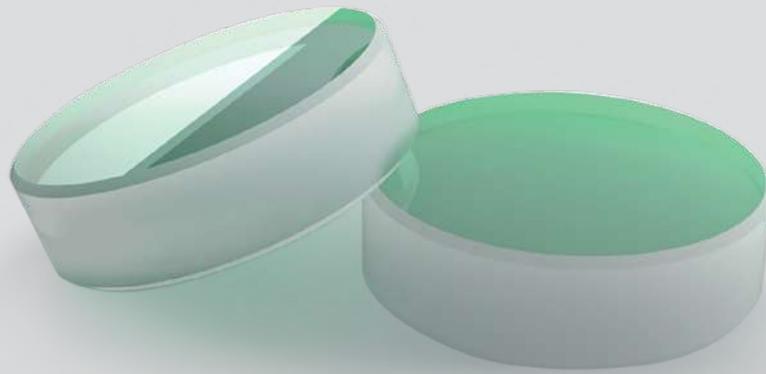

$R_0$  - peak reflectance  
 $r$  - radial coordinate  
 $w_0$  - radius at  $R_0/e^2$  level  
 $n$  - Gaussian order

## Standard specifications

VARIABLE REFLECTIVITY MIRRORS	
Radius $w_0$	2 mm
Gaussian order $n$	2
Substrate material	UV grade fused silica
Clear aperture	>85%
Face dimensions tolerance	+0/-0,15 mm
Thickness tolerance	±0,25 mm

# Laser cavity output couplers

## Main features

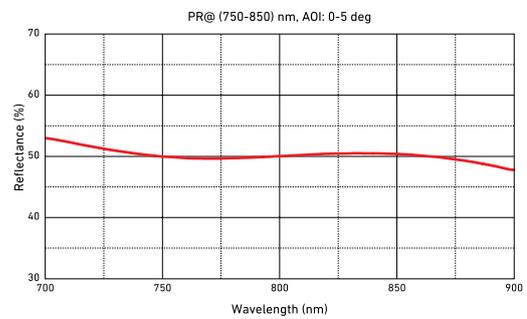

- Mirror substrates fabricated from high-quality UV grade fused silica
- Standard substrate dimensions are  $\varnothing 25,4 \times 5$  mm
- 50% - 99% reflectance selection at most popular wavelength ranges
- Custom coatings, substrate material and dimensions are available upon request

## Application examples

- Output couplers for stable laser resonators
- Partial reflectors (beam attenuators)

## Standard specifications

LASER CAVITY OUTPUT COUPLERS	
Substrate material	UV grade fused silica
Clear aperture	>85%
Face dimensions tolerance	+0/-0,15 mm
Thickness tolerance	$\pm 0,25$ mm
Parallelism error	<30 arcsec
Protective chamfers	<0,35 mm at 45°
Surface quality	20-10 S-D
Surface flatness	$< \lambda/8 @ 632,8$ nm
Rear side	Antireflective coated at operating wavelength range
Laser induced damage threshold	>10 J/cm <sup>2</sup> @1064 nm, 10 ns (for 1020-1070 nm couplers)

Output couplers are used in stable laser resonators in order to emit a part of the energy, which is circulating in the laser cavity. One has to carefully select the proper spatially constant reflection/transmission ratio of the output coupler in order to optimize the lasing operation and prevent from damaging intracavity optical elements. Front surface of output couplers is partially reflective coated at a certain wavelength range, while the rear surface is antireflective coated in order to prevent Fresnel reflection losses. What is more, these laser cavity output couplers can be successfully implemented as fixed ratio laser power attenuators for a certain wavelength range.

# Low GDD ultrafast mirrors

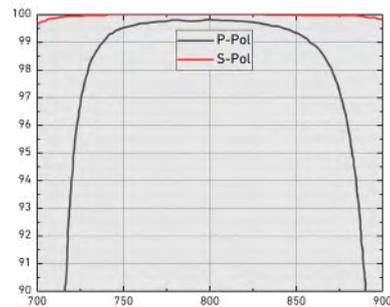

## Main features

- Mirror substrates fabricated from high-quality UV grade fused silica
- Standard substrate dimensions are  $\varnothing 25,4 \times 5$  mm
- Coating stack is designed to have low dispersion (GDD) for the reflected wavelengths
- $0^\circ$  or  $45^\circ$  angle of incidence selection
- Custom coatings, substrate material and dimensions are available upon request

## Application examples

- High reflectivity mirrors for tunable and broadband ultrashort laser sources
- Broadband light beam steering and folding

Low GDD Ultrafast mirrors are designed for high power ultrashort (femtosecond) laser pulse applications to provide both maximized high reflectivity and minimized low GDD value at the same time. Such coatings are used for internal and external beam manipulation applications where pulse broadening effect is undesirable. Our Low GDD Ultrafast mirrors are intended for Ti:Sapphire, Nd:Glass or Ytterbium doped host based lasers working in femtosecond regimes.

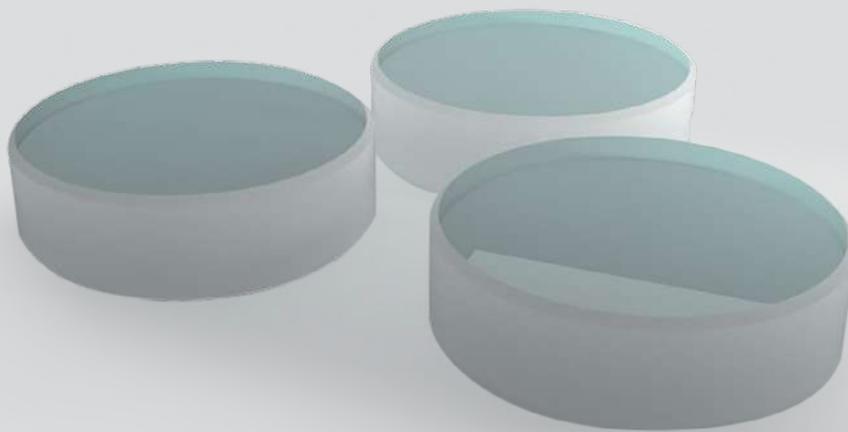

## Standard specifications

- Custom coatings, substrate material and dimensions are available upon request

## Application examples

- Laser separation of the laser fundamental wavelength and its harmonics
- Laser beam combining
- Laser resonator pump (rear) mirror

Wavelength separators and combiners provide spatial separation or combination of different spectral components. These optical elements feature highly reflective dielectric coatings on the front side and antireflective dielectric coatings for transmissive spectral components on the rear side of UV grade fused silica substrates.

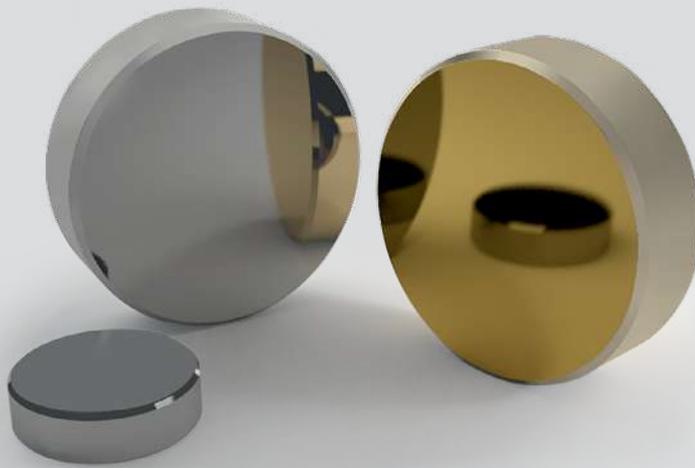

## Standard specifications

WAVELENGTH SEPARATORS AND COMBINERS	
Substrate material	UV grade fused silica
Clear aperture	>85%
Face dimensions tolerance	+0/-0.15 mm
Thickness tolerance	$\pm 0,25$ mm
Parallelism error	<30 arcsec
Protective chamfers	<0,35 mm at 45°
Surface quality	20-10 S-D
Surface flatness	< $\lambda/8$ @632,8 nm
Laser induced damage threshold	>10 J/cm <sup>2</sup> @1064 nm, 10 ns (for 1020 nm - 1070 nm reflecting separator)

# Flat and curved metal-coated mirrors

## Main features

- Mirror substrates fabricated from high-quality UV grade fused silica
- Standard substrate dimensions are  $\varnothing 25,4 \times 5$  mm
- UV enhanced aluminum, protected aluminum, protected silver, low GDD enhanced silver and protected gold metallic coatings selection
- Relatively uniform reflectance over a wide wavelength range
- Radius of curvature selection from infinity to -200 mm
- Custom metal-coated mirrors available upon request

## Application examples

- Broadband reflectivity and low chromatic dispersion mirrors for white-light interferometers and broadband laser sources
- Partially transmissive broadband mirrors
- Extremely long infrared (up to 20  $\mu\text{m}$ ) mirrors
- Plano-convex and plano-concave designs

Metal-coated mirrors exhibit a relatively uniform reflectivity over wide wavelength range. They are nearly insensitive to angle of incidence and polarization state of light, thus their reflection losses are significantly higher compared to dielectric thin-film mirrors.

## Standard specifications

FLAT AND CURVED METAL-COATED MIRRORS	
Substrate material	UV grade fused silica
Substrate dimensions	$\varnothing 25,4 \times 5$ mm
Clear aperture	>85%
Face dimensions tolerance	+0/-0,15 mm

Plano-concave cylindrical lenses

Axicons (conical lenses)

# Plano-convex spherical lenses

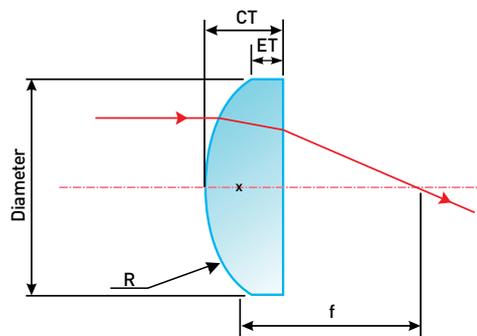

## Main features

- Fabricated from high-quality UV grade fused silica and BK7 glasses
- Standard diameters are  $\varnothing 12,7$  mm and  $\varnothing 25,4$  mm
- Focal length selection from 20 mm to 10 000 mm
- Antireflective coatings, custom substrate material, dimensions, and focal lengths available upon request

## Application examples

- Focusing a collimated beam
- Collimating beam from a point source
- Beam expanders and collimators

Plano-convex spherical lenses have one plano and one spherical convex surface, while their focal lengths are positive. These lenses provide the best performance when used for 5X to infinite-conjugate ratio applications, e.g. focusing a collimated light beam or collimating beam from a point source.

# Plano-concave spherical lenses

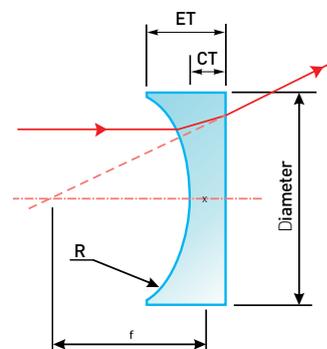

## Main features

- Fabricated from high-quality UV grade fused silica and BK7 glasses
- Standard diameters are  $\varnothing 12,7$  mm and  $\varnothing 25,4$  mm
- Focal length selection from -20 mm to -10000 mm
- Antireflective coatings, custom substrate material, dimensions, and focal lengths available upon request

## Application examples

- Collimating a convergent beam
- Diverging a collimated beam
- Relay imaging

Plano-concave spherical lenses have one plano and one spherical concave surface, while their focal lengths are negative. These lenses provide the best performance when used for 5X to infinite-conjugate ratio applications, e.g. collimating a convergent beam, diverging a collimated beam. To prevent spherical aberrations collimated beam should always be incident on curved lens surface and vice versa.

# Bi-convex spherical lenses

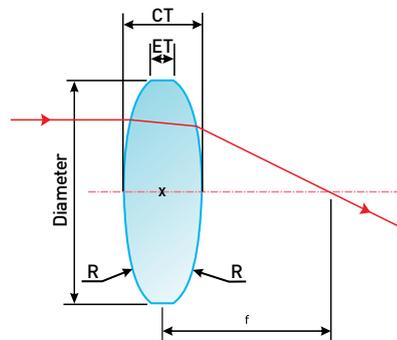

## Main features

- Fabricated from high-quality UV grade fused silica and BK7 glasses
- Standard diameter is  $\varnothing 25,4$  mm
- Focal length selection from 25 mm to 100 mm
- Antireflective coatings, custom substrate material, dimensions, and focal lengths available upon request

## Application examples

- Finite-conjugate imaging
- Beam relay applications
- Beam expanders

Bi-convex spherical lenses feature two convex surfaces with the same radius of curvature, while their focal length is positive. These lenses perform the best at finite conjugate (0,2X - 5X ratio) applications. At 1:1 conjugate ratio spherical aberrations, coma and distortion are minimized.

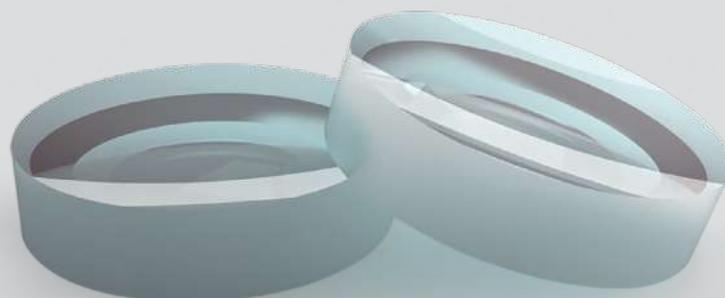

## Standard specifications

BI-CONVEX SPHERICAL LENSES	
Substrate material	BK7, UVFS
Wavelength range	Uncoated BK7 lenses: 350 nm - 2 $\mu$ m Uncoated UVFS lenses: 185 nm - 2,1 $\mu$ m

# Plano-convex cylindrical lenses

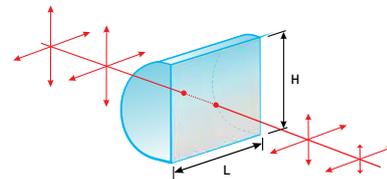

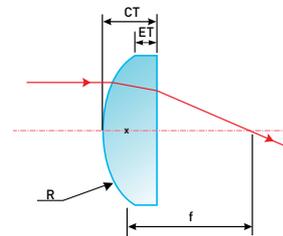

## Main features

- Fabricated from high-quality UV grade fused silica, BK7 glasses
- Standard face dimensions are 25,4 x 25,4 mm and 25,4 x 50,8 mm
- Focal length selection from 50 mm to 10000 mm
- Antireflective coatings, custom substrate material, dimensions, and focal lengths available upon request

## Application examples

- Coupling into a slit or linear shape detectors
- Anamorphic beam shaping
- Astigmatism correction of laser diode beam

Plano-convex cylindrical lenses feature single plano and single convex cylindrical surface, while their focal length is positive. These lenses operate only in one dimension rather than two, compared to plano-convex spherical lenses. Plano-convex cylindrical lenses provide the best performance at the same operating conditions as plano-convex spherical lenses: from 5X to finite-conjugate ratio.

- Fabricated from high-quality UV grade fused silica, BK7 glasses
- Standard face dimensions are 25,4 x 25,4 mm and 25,4 x 50,8 mm
- Focal length selection from -25 mm to -1000 mm
- Antireflective coating, custom substrate material, dimensions, and focal lengths available upon request

## Application examples

- Anamorphic beam shaping
- Laser projection
- Laser scanning

Plano-concave cylindrical lenses feature single plano, single concave cylindrical surface and negative focal length. These lenses are similar to plano-concave spherical lenses, though the difference is that they operate only in a single dimension rather than two symmetrical dimensions. Applicable conditions for optimal performance are the same as for plano-concave lenses: from 5X to infinite-conjugate ratio.

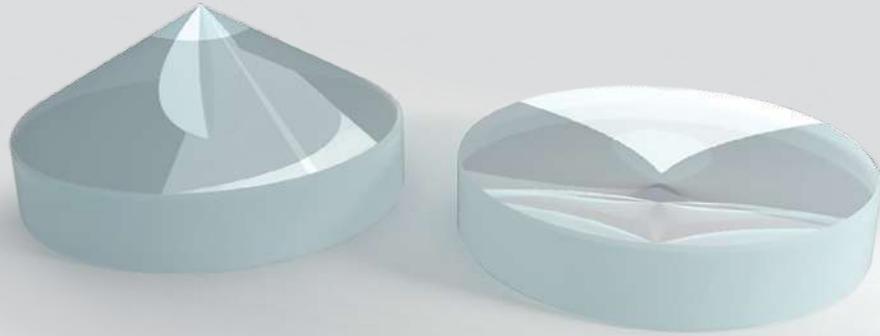

## Standard specifications

PLANO-CONVEX CYLINDRICAL LENSES	
Substrate material	BK7, UVFS
Wavelength range	Uncoated BK7 lenses: 350 nm - 2 μm Uncoated UVFS lenses: 185 nm - 2,1 μm
Clear aperture	>90%
Diameter tolerance	+0/-0,1 mm
Center thickness	2 mm
Thickness tolerance	±0,5 mm
Centration error	<3 arcmin
Focal length tolerance	±3%@632,8 nm
Protective chamfers	<0,35 mm at 45°
Surface quality	40-20 S-D
Surface irregularity	≤λ/4@632,8 nm
Coatings	Uncoated, available upon request

# Axicons (conical lenses)

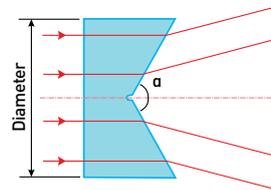

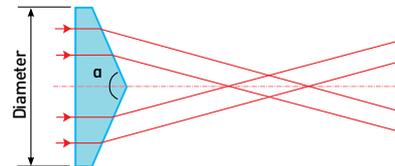

## Main features

- Fabricated from high-quality UV grade fused silica, BK7 glasses
- Plano-convex and plano-concave designs
- Regular and advanced grade axicons
- Wide axicon apex angle selection
- Antireflective coatings, customization available upon request

## Application examples

- Corneal surgery
- Optical coherence tomography
- Atom trapping

Axicons (conical lenses) are famous for their ability to transform a collimated Gaussian beam into an approximation of non-diffracting Bessel beam in the near-field and ring-shaped beam in the far-field. Most often they are used in tandem with other types of lenses. Optogama provide plano-convex and plano-concave types of conical lenses. These lenses feature one convex surface or one concave conical surface, respectively, while second surface is plano in both cases.

## Standard specifications

AXICONS		
Type	Plano-convex	Plano-concave

Optogama provide uncoated and unmounted dispersing prisms, HR right-angle retroreflectors, corner cube retroreflectors and penta prisms for UV, VIS and NIR applications. Applications of these prisms include beam bending, folding, retroreflecting, optical alignment and more. Since most of the prisms are initially uncoated, we recommend applying the appropriate coatings to optimize the performance. Metallic and dielectric thin-film coatings are available upon demand.

Dispersing prisms

Right-angle prisms

Corner cube retroreflectors

Penta prisms

HR right-angle retroreflectors

# Dispersing prisms

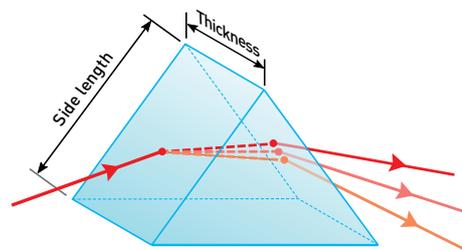

## Main features

- Fabricated from high-quality UV fused silica, BK7, SF11 glasses
- Input and output faces are optically polished (refer to the drawing)
- Small losses for p-polarized light
- Group delay dispersion adjustment of ultrashort pulses
- Antireflective coatings, custom design, substrate material and dimensions available upon request

## Application examples

- Compression of ultrashort laser pulses
- Dispersion compensation in mode-locked lasers
- Spatial separations of different spectral components

Optogama standard uncoated isosceles dispersing prisms are fabricated from UVFS, BK7, SF11 optical glasses and offer different dispersive properties. Used in both intra- and extra-cavity setups for ultrashort laser pulse temporal manipulation. Their construction enables to use them at Brewster angle, therefore p-polarized light losses are extremely low.

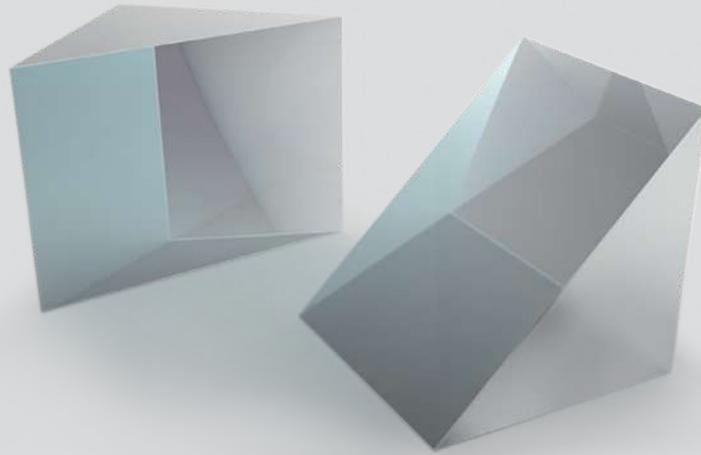

## Standard specifications

DISPERSING PRISMS	
Substrate material	BK7, SF11, UVFS
Wavelength range	Uncoated BK7 prisms: 350 nm - 2 μm Uncoated UVFS prisms: 185 nm - 2,1 μm Uncoated SF11 prisms: 420 nm - 2,3 μm
Design wavelength	800 nm
Clear aperture	80% of face and length width
Dimensions tolerance	±0,25 mm
Angle tolerance	±2 arcmin
Protective chamfers	<0,35 mm at 45°
Surface quality	40-20 S-D
Surface flatness	≤λ/4@632,8 nm
Coatings	Uncoated, available upon request

# Right-angle prisms

## Main features

- Fabricated from high-quality UV grade fused silica, BK7
- Rectangular faces are optically polished
- Standard and advanced grade selection
- Metallic and dielectric thin-film coatings, custom substrate material and dimensions are available upon request

## Application examples

- 90° internal or external mirror
- Retroreflector
- Components for cube beamsplitter

Optogama standard uncoated right-angle (45°-90°-45°) design prisms are fabricated from UVFS and BK7 optical glasses and have three optically polished rectangular surfaces (refer to the drawing). These prisms are popular at 90° internal or external beam bending, 180° beam folding, image rotation. These applications are based on the total internal reflection at glass-air boundary inside the prism, except 90° external beam bending, which requires metallic or highly reflective dielectric thin film to be applied onto the hypotenuse face. Antireflective coatings have to be applied in order to optimize the optical transmission for a particular application. Contact us for coating service, custom solutions, and pricing.

## Standard specifications

RIGHT-ANGLE PRISMS	
Substrate material	BK7, UVFS
Wavelength range	Uncoated BK7 prisms: 350 nm - 2 μm Uncoated UVFS prisms: 185 nm - 2.1 μm

# Corner cube retroreflectors

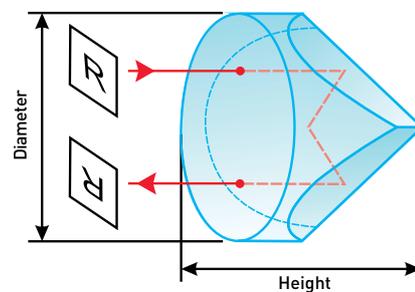

## Main features

- Fabricated from high-quality UV grade fused silica, BK7 optical glasses
- Provides high-precision angle insensitive retroreflection ( $180^\circ \pm 30$  arcsec)
- Inverts and reverses the image
- Antireflective coatings, custom material and dimensions available upon request

## Application examples

- Beam alignment
- Retroreflectors

Optogama standard uncoated corner cube retroreflectors are fabricated from high-quality UVFS and BK7 optical glasses. Corner cube retroreflector prisms provide the beam deviation by  $180^\circ$  and creates an inverted, reversed image independent of the angle of incidence, with a wide incident angle acceptance range. Operating principle is based on three total internal reflections inside the prism. Antireflective coatings have to be applied in order to optimize the optical transmission for a particular application. Contact us for coating service, custom solutions and pricing.

## Standard specifications

CORNER CUBE RETROREFLECTORS	
Substrate material	BK7, UVFS
Beam deviation	$180^\circ \pm 30$ arcsec
Wavelength range	Uncoated BK7 retroreflectors: 350 nm - 2 $\mu$ m Uncoated UVFS retroreflectors: 185 nm - 2,1 $\mu$ m
Clear aperture	>80% of face dimensions
Dimensions tolerance	+0/-0,3 mm
Angle tolerance	$\pm 5$ arcsec
Protective chamfers	<0,35 mm at $45^\circ$
Surface quality	40-20 S-D
Surface flatness	<A/4@632,8 nm
Coatings	Uncoated, available upon request

# Penta prisms

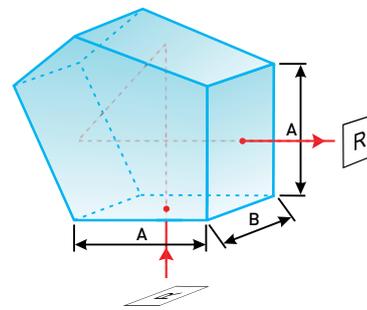

## Main features

- Fabricated from high-quality BK7 glass
- $90^\circ \pm 1$  arcmin deviation
- Does not invert, reverse beam or image
- $< \lambda/10 @ 632,8$  nm surface flatness over clear aperture
- Antireflective coatings on input and output faces, custom substrate material and dimensions upon request

## Application examples

- Beam steering
- Optical system alignment

Optogama unmounted penta prisms provide  $90^\circ$  beam and image deviation without inverting or reversing the image. Penta prisms reflecting surfaces are aluminized with inconel and black paint overcoat, while input and output faces are uncoated (refer to the drawing). An important feature is that these prisms do not have to be precisely aligned to operate properly. Therefore, these five-sided reflecting design prisms are essential for applications, where precise  $90^\circ$  deviation is required. Antireflective coatings have to be applied in order to optimize the optical transmission for a particular application. Contact us for coating service, custom solutions and pricing.

## Standard specifications

PENTA PRISMS	
Beam deviation	$90^\circ \pm 1$ arcmin
Wavelength range	Uncoated BK7 prisms: 350 nm - 2 $\mu$ m
Clear aperture	>70% of face dimensions length and width
Dimensions tolerance	$\pm 0,1$ mm
Angular tolerance	$\pm 1$ arcmin
Protective chamfers	<0,35 mm at $45^\circ$
Surface quality	40-20 S-D
Surface flatness	$< \lambda/10 @ 632,8$ nm over clear aperture

# HR right-angle retroreflectors

## Main features

- Fabricated from high-quality UV grade fused silica
- Reflectance  $R_s > 99.6\%$  per surface
- Coating stack is designed to have low dispersion (GDD) for the reflected wavelengths
- Custom coatings, substrate material and dimensions are available upon request

## Application examples

- Ultrashort pulse back reflection
- Delay lines

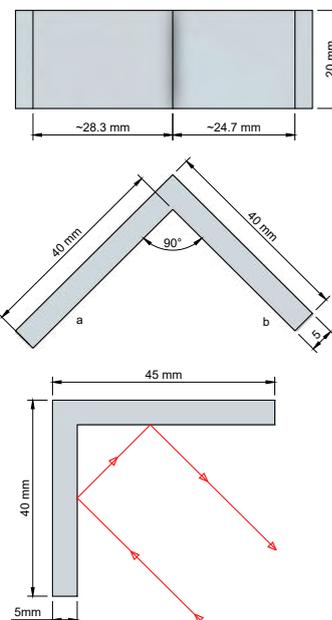

Optogama HR right-angle retroreflectors consist of two highly reflective mirrors glued at right angle with precision as high as  $< 30$  arcsec. Hollow design eliminates the material dispersion, which is inherent in common retroreflector prisms, making them perfect for ultrashort pulse back reflection applications. Right angle retroreflectors are manufactured from high quality UVFS substrates, coated with low GDD high reflective coatings designed for Ti:Sapphire, Erbium and Ytterbium doped host based femtosecond laser systems.

## Standard specifications

HR RIGHT-ANGLE RETROREFLECTORS	
Substrate material	UVFS
Aperture dimensions	16 mm
Substrate dimensions	40x20x5 mm
Face dimensions tolerance	+0/-0,1 mm
Thickness tolerance	$\pm 0.2$ mm
Surface quality	20-10 S-D
Surface flatness	$< \lambda/6 @ 632.8$ nm
90° angle tolerance	$\pm 30$ arcsec

Optogama provide uncoated flat-parallel windows, flat-wedge windows, and curved windows fabricated from UVFS and BK7 optical glasses for UV, VIS and NIR applications. These optical components are the substrates of mirrors, output couplers and beamsplitters in any kind of laser and optical systems. They are initially uncoated and demand metallic or dielectric coatings for a particular application. Optogama provide coating service upon request. Contact us for custom solutions and pricing.

# Windows

# OWS

Flat-parallel windows

Flat-wedge windows

Curved windows

# Flat-parallel windows

## Main features

- Fabricated from high-quality UV grade fused silica, BK7 glasses
- Optically polished surfaces
- Available in round or rectangular shape with various thicknesses
- Custom coated and uncoated windows are available upon request

## Application examples

- Substrates of mirrors and beamsplitters
- Isolation of different physical environments
- Beam sampling

Standard uncoated flat-parallel windows are fabricated from BK7 or UV grade fused silica optical glass. UV grade fused silica glass windows are a good option for UV, ultrashort pulse, and high-power laser applications due to their low sensitivity to temperature variations, relatively high damage threshold and UV transmission down to 185 nm.

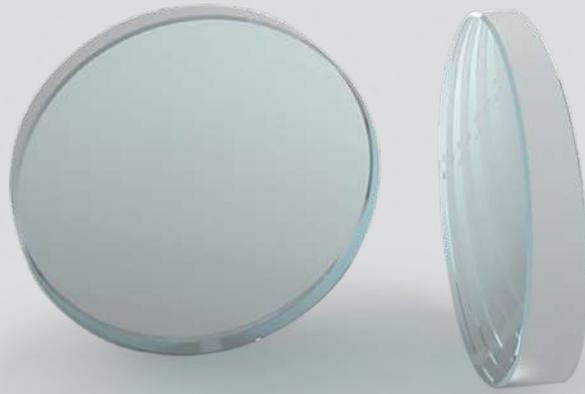

BK7 glass windows are a cost-effective choice for visible and near-infrared range, low/mid-power laser and non-laser applications. These components are initially uncoated and demand metallic or dielectric coatings for a particular application. Optogama provide coating service upon request. Contact us for custom solutions and pricing.

# Flat-wedge windows

## Main features

- Fabricated from high-quality, laser grade polished UV grade fused silica, BK7 glasses
- Standard diameters are  $\varnothing 12,7$  mm,  $\varnothing 25,4$  and  $\varnothing 50,8$  mm
- Wedge angle selection from  $0,5^\circ$  to  $3^\circ$
- Coatings, custom substrate material, dimensions are available upon request

## Application examples

- Protection from undesirable laser cavity feedback
- Elimination of fringe pattern due to back reflections
- Variable beam steering
- Beam sampling

Windows with a slight wedge are commonly used to prevent harmful laser cavity feedback and beam interference effects. Standard Optogama uncoated flat-wedge windows are fabricated from BK7 and UV grade fused silica optical glass. UV grade fused silica glass flat-wedge window is a good option for UV, ultrashort pulse and high-power laser applications because of a low sensitivity to temperature variations, relatively high damage threshold and UV transmission down to 185 nm. BK7 glass window is a cost-effective choice for visible and near-infrared range, low or mid-power laser and non-laser applications.

# Curved windows

## Main features

- Fabricated from high-quality UVFS glass
- Plano-convex or plano-concave design
- Coatings, custom substrate material, dimensions are available upon request

## Application examples

- High reflectivity mirrors, output couplers in laser resonators
- Reflective and refractive optical elements in beam expanders, collimators, reducers, telescopes

Curved windows are an excellent choice as a substrate of reflective and refractive optical elements. Commonly metallic or dielectric thin-film coatings are applied onto the windows surfaces to be used for a particular application. Standard Optogama uncoated curved windows are fabricated from UV grade fused silica glass material. UV grade fused silica glass curved windows are a good option for UV, ultrashort pulse and high-power laser applications because of a low sensitivity to temperature variations, relatively high damage threshold and UV transmission down to 185 nm.

## Standard specifications

CURVED WINDOWS

Optogama provide neutral density absorption filters with flat transmission characteristics over a particular wavelength range. Also, bandpass (interference) filters, which selectively transmit particular wavelength range and eliminate out of band spectral components. Custom filters are available upon request. Contact us for solutions and pricing.

# Filter

# S

Neutral density  
absorption filters

Bandpass  
(interference) filters

Circular variable  
neutral density filters

# Neutral density (by absorption) filters

## Main features

- Optical density selection from 0,1 to 4
- $\varnothing$ 25,4 mm standard diameter
- Excellent for low-power applications
- Custom dimensions, optical densities are available upon request

## Application examples

- Overexposure prevention for cameras and other detectors
- Laser power attenuation

Neutral density (by absorption) filters are designed for a flat transmission over a particular wavelength range and defined by the optical density (OD). Overall optical attenuation is a sum of optical absorption in neutral density optical glass and Fresnel reflection losses. Neutral density optical filter densities add up when used in series.

## Standard specifications

NEUTRAL DENSITY (BY ABSORPTION) FILTERS	
Material	Neutral density optical glass
Design wavelength	450-650 nm
Optical density tolerance	$\pm$ 5%
Clear aperture	>85%
Face dimensions tolerance	+0/-0,2 mm
Parallelism error	<3 arcmin
Protective chamfers	<0,35 mm at 45°
Surface quality	60-40 S-D

# Bandpass (interference) filters

## Main features

- Out of band transmission <0,01%
- Central wavelength selection from 355 nm to 1064 nm
- Standard mount size is  $\varnothing 25,4 \times 6,3$  mm

## Application examples

- Fluorescence microscopy
- Spectroscopy
- Imaging

Optogama bandpass (interference) filters selectively transmit specific spectral components, while eliminating the ones out of band. They are designed to be used with collimated light and at normal angle of incidence. Each of these filters is mounted in a black anodized aluminum mount with a propagation direction mark on it. Customization of central wavelength, peak transmission and bandwidth is available upon request.

## Standard specifications

BANDPASS (INTERFERENCE) FILTERS	
Center wavelength tolerance	$\pm 2$ nm
Out of band transmission	<0,01%
Bandwidth tolerance	$\pm 2$ nm
Clear aperture	>80%
Surface quality	80-50 S-D
Mount	$\varnothing 25,4 \times 6,3$ mm black anodized aluminum mount

# Circular variable neutral density filters

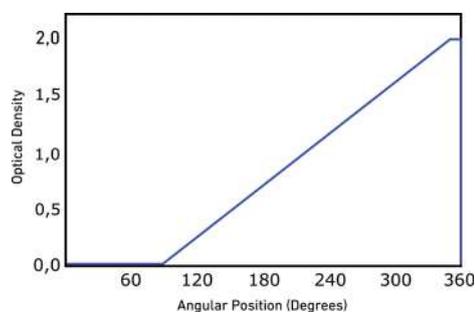

## Main features

- Wide operational wavelength range (250-2500 nm with UVFS substrate)
- Maintains the transmitted spectral profile

## Application examples

- Continuously variable light attenuation over a broad wavelength range

Circular ND filters provide continuously variable, linear attenuation of light intensity by rotating the filter around its center. Transmitted intensity varies as a function of the optical density range. The filter can be used for natural light and also for laser applications. By using two filters in combination in reverse rotation can obtain a fixed density attenuation and extends the number applications. Sizes are available from 25 mm to 100 mm in diameter.

## Standard specifications

CIRCULAR VARIABLE NEUTRAL DENSITY FILTERS	
Substrate material	BK7 or UVFS
Operating wavelength range	380-2000 nm (BK7) 250-2500 nm (UVFS)
Type	Reflective metal coated (gradient thickness metal layer)
Calibration wavelength	532 nm
Inner hole diameter	8.0 mm
Inner hole diameter tolerance	+0,15/-0,00 mm
Outside diameter tolerance	+0,00/-0,15 mm
Thickness	1,75 mm
Surface flatness	<math>\lambda @ 632,8 \text{ nm}</math>
Surface quality	60-40 S-D
Clear aperture	>90%
Coated area	0-270 deg
Parallelism	<math>< 3 \text{ arcmin}</math>

# Polarization optics

Optogama provide optical elements for polarization manipulation and controlling. Standard components include quarter-wave and half-wave three types of waveplates: zero-order compensated, air-spaced crystalline quartz waveplates, crystalline quartz and magnesium fluoride achromatic waveplates for

broadband applications and zero-order, monolithic design Mid-IR (MWIR, LWIR) waveplates. Standard polarization optics also include birefringent and thin-film polarizers: Glan-type polarizers, polarizing cubes, Brewster-type thin-film and high-contrast thin-film polarizers for UV, VIS and NIR applications.

# iza -

# S

Crystalline quartz waveplates

Achromatic (broadband) waveplates

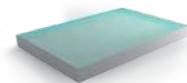

Mid-infrared (IR) waveplates

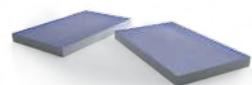

Glan-type polarizers

Polarizing cubes

Brewster-type thin-film polarizers

High contrast thin-film polarizers

# Crystalline quartz waveplates

## Main features

- Zero-order compensated, air-spaced design
- True first order (FO), optically bonded on UVFS plate waveplates for high power UV application
- Wide quarter and half waveplate selection
- Mounted in  $\varnothing 25,4 \times 6$  mm black anodized metal mount
- $\varnothing 18$  mm clear aperture
- Antireflective coatings ( $R < 0,15\%$ ) on each surface
- Custom size, operating wavelength and retardation available upon request

## Application examples

- Linear-to-circular polarization transformation and vice versa
- Linear polarization rotation
- Optical isolation

Optogama provide mounted crystalline quartz zero-order compensated, air-spaced half-wave and quarter-wave retardance waveplates designed for a particular wavelength in the range of 257 - 1550 nm. Air-spaced construction enables these waveplates to be used for high-power applications, while zero-order design features lower temperature and wavelength dependence compared to low and multiple order waveplates.

## Standard specifications

CRYSTALLINE QUARTZ WAVEPLATES	
Material	High-purity crystalline quartz
Type	Zero order (ZO) compensated, air-spaced and first order (FO), optically bonded for UV application
Available operating wavelength range	200 nm - 2200 nm
Typical retardation tolerance	$< \lambda / 300 @ 20^\circ \text{C}$
Clear aperture	$\varnothing 18$ mm
Parallelism error	$< 5$ arcsec
Surface quality	20-10 S-D
Transmitted wavefront distortion	$< \lambda / 10 @ 632,8$ nm
Coatings	Antireflective coatings ( $R < 0,15\%$ ) on each surface
LIDT	$> 12 \text{ J/cm}^2 @ 1064$ nm, 10 ns (for 1064 nm waveplates)
Mount	Mounted in $\varnothing 25,4 \times 6$ mm black anodized metal mount

# Achromatic (broadband) waveplates

## Main features

- Air-spaced design
- Mounted in  $\varnothing 25,4 \times 6$  mm black anodized metal mount
- $\varnothing 12$  mm and  $\varnothing 18$  mm clear aperture selection
- Broadband antireflective coatings ( $R < 0,5\%$ ) on each surface
- Custom size, operating wavelength range and retardation available upon request

## Application examples

- Linear-to-circular polarization transformation and vice versa
- Linear polarization rotation
- Optical isolation

Lasers provide mounted achromatic (broadband) half-wave and quarter-wave retardance waveplates for several bands in the wavelength range of 460 nm - 1700 nm. Air-spaced construction allows to use these waveplates for high-power applications. These waveplates are ideal for multiple wavelengths and broadband operation, due to their constant retardance over a particular broad wavelength range.

## Standard specifications

ACHROMATIC (BROADBAND) WAVEPLATES

# Mid-infrared (MIR) waveplates

## Main features

- Zero-order, monolithic design
- Operating wavelength selection from 2800 nm to 10600 nm
- Mounted in ø25,4 x 6 mm black anodized metal mount
- ø6 mm and ø10 mm standard clear apertures
- Custom size, operating wavelength available upon request

## Application examples

- Linear-to-circular polarization transformation and vice versa
- Linear polarization rotation
- Optical isolation

Optogama provide unique zero-order, monolithic design mid-infrared (MWIR and LWIR) waveplates mounted in ø25,4 x 6 mm black anodized metal mount for the range of 2800 nm - 10600 nm. These waveplates are available with quarter-wave, half-wave or any other custom retardance. MWIR and LWIR waveplates designed for a particular wavelength in the range from 3500 nm to 10600 nm are antireflective coated, while 2800 nm - 3000 nm waveplates are uncoated.

## Standard specifications

MID-IR WAVEPLATES	
Type	Zero-order, monolithic
Available operating wavelength range	2800 nm - 10600 nm
Retardation tolerance	~λ/50@20 °C
Clear aperture	ø6 mm and ø10 mm
Parallelism error	<1 arcmin
Surface quality	60-40 S-D
Coatings	Antireflective coating (R<1%) on each surface or uncoated
Laser induced damage threshold	2 J/cm <sup>2</sup> @ 9000 nm, 10 ns (for 9000nm waveplates)
Mount	Mounted in ø25,4 x 6 mm black anodized metal mount

# Glan-type polarizers

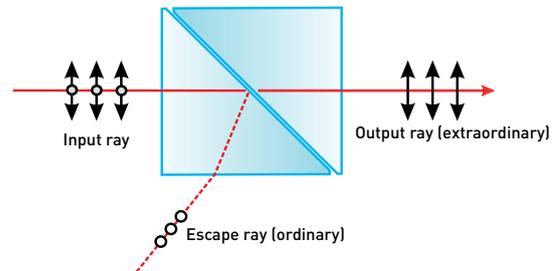

## Main features

- Substrate material:  $\alpha$ -BBO, calcite and  $\text{YVO}_4$
- Extremely high extinction ratio over a wide wavelength range
- Air-spaced configuration
- Minor transmitted beam displacement and deviation
- Single  $\text{MgF}_2$  coating layer on every optical face for optimized broadband transmission
- Customization available upon request

## Application examples

- Optical isolation
- Polarization separation
- Polarization cleaning
- Laser power attenuation

Optogama provide air-spaced Glan-Taylor and Glan-laser type polarizers fabricated from  $\alpha$ -BBO (UV), calcite (VIS to NIR),  $\text{YVO}_4$  (VIS to Mid-IR) birefringent crystalline material and mounted in a barrel-type black anodized aluminum mount. Glan-type polarizers are constructed to transmit only the extra-ordinary polarized beam, while ordinary polarized beam is deflected. These polarizers feature an extremely high extinction ratio over a wide wavelength range and their common applications include polarization separation, polarization cleaning, power attenuation. Glan-Taylor polarizers are designed for low and mid-power applications, while Glan-Laser – for high-power regime due to their higher damage threshold and escape window in housing for deflected ordinary polarized beam. Single  $\text{MgF}_2$  layer is applied onto Glan-type polarizer optical surfaces in order to noticeably maximize their broadband transmission.

## Standard specifications

GLAN-TYPE POLARIZERS	
Extinction ratio (transmitted beam)	$\alpha$ -BBO and $\text{YVO}_4$ polarizers: $<5 \times 10^{-4}$ Calcite polarizers: $<5 \times 10^{-5}$
Beam deviation	$<3$ arcmin
Length tolerance	$\pm 0,1$ mm
Parallelism error	$<1$ arcmin
Surface quality	20-10 S-D
Surface flatness	$<\lambda/4$ @ 632.8 nm
Coatings	Single $\text{MgF}_2$ layer
LIDT	Glan-Taylor polarizers: >200 MW/cm <sup>2</sup> @ 1064 nm, 10 ns Glan-laser polarizers: >500 MW/cm <sup>2</sup> @ 1064 nm, 10 ns
Mount	Black anodized aluminum barrel-type mount

# Polarizing cubes

## Main features

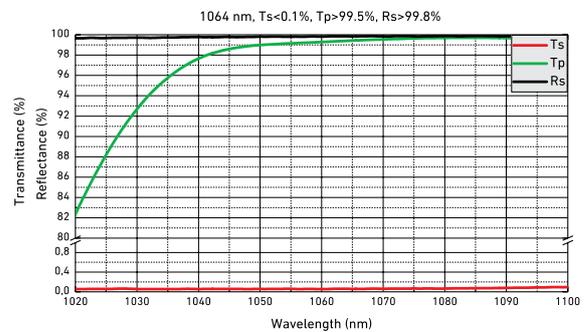

- Optically contacted or epoxy glued configurations available
- Minor transmitted beam deviation (<3 arcmin)
- Antireflective coated input and output faces

## Application examples

- Beam separation and combining by polarization
- Polarization separation

## Standard specifications

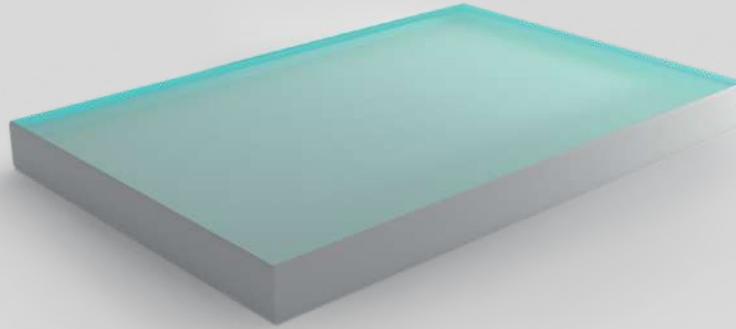

POLARIZING CUBES	
Beam deviation	<3 arcmin
Clear aperture	>85%
Face dimensions tolerance	+0/-0.2 mm
Thickness tolerance	±0.25 mm
Protective chamfers	<0.35 mm at 45°
Coatings	Hypotenuse face: polarization beamsplitting coating Input and output faces: antireflective coatings
Surface quality	40-20 S-D
Surface flatness	<λ/4@632.8 nm
Laser induced damage threshold	>15 J/cm²@1064 nm, 10 ns (for 1025-1080 nm optically contacted cubes) >0.1 J/cm²@532 nm, 10 ns (for 400-700 nm epoxy glued cubes)
Mount	Unmounted, available upon request

Optogama unmounted polarizing cubes are fabricated from two identical right-angle prisms with their hypotenuse faces adhered together via optical contact or epoxy glue. Polarizing cubes are designed to transmit p-polarized light with minor deviation (<3 arcmin) and deflect s-polarized light by 90° angle. Prior to cementing polarizing dielectric thin-film coating is applied onto the hypotenuse face of one of the prisms, while input and exit surfaces are antireflective coated for particular wavelength range. Optogama optically contacted polarizing cubes provide higher laser induced damage threshold, therefore are primarily used for high-power applications, while epoxy glued cubes are a cost-effective choice for low and mid-power applications. We recommend to use these elements with collimated laser beams in order to avoid beam aberrations.

# Brewster-type thin-film polarizers

## Main features

- Substrates fabricated from high-quality UV grade fused silica optical glass
- Designed for most popular laser line and harmonic wavelengths
- Angle of incidence: Brewster-angle
- Typical extinction ratio  $T_p:T_s > 200:1$
- Custom dimensions, operating wavelength available upon request

## Application examples

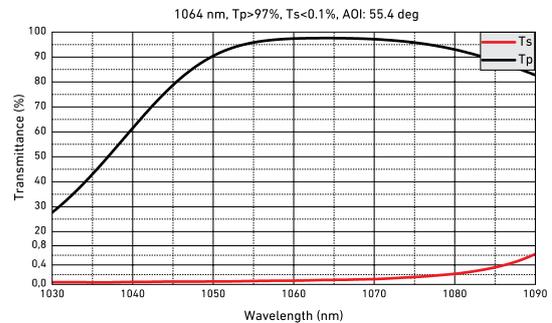

- Polarization separation
- Optical isolation
- Polarization cleaning
- Laser power attenuation

## Standard specifications

BREWSTER-TYPE THIN-FILM POLARIZERS	
Material	UVFS
Clear aperture	>85%
Face dimensions tolerance	+0,0/-0,15 mm
Thickness tolerance	± 0,25 mm
Parallelism error	<30 arcsec
Protective chamfers	<0,35 mm at 45°
Surface quality	20-10 S-D
Surface flatness	<λ/8@632,8 nm for 10x20 mm; <λ/6@632,8 nm for 20 x 40 mm
Transmitted wavefront distortion	<λ/10@632,8 nm for 10x20 mm; <λ/6@632,8 nm for 20 x 40 mm
Laser induced damage threshold	>10 J/cm <sup>2</sup> @1064 nm, 10 ns (for 1064 nm polarizers)
Mount	Unmounted, available upon request

Optogama standard Brewster-type thin-film polarizers are designed for applications, which require polarization separation. These elements provide a moderate extinction ratio  $T_p:T_s > 200:1$  and are perfectly fit for high-power and UV applications. Optogama design and manufacture standard and custom Brewster type polarizers in the range of 230 nm and 2000 nm with face dimensions up to 160 mm.

# High-contrast thin-film polarizers

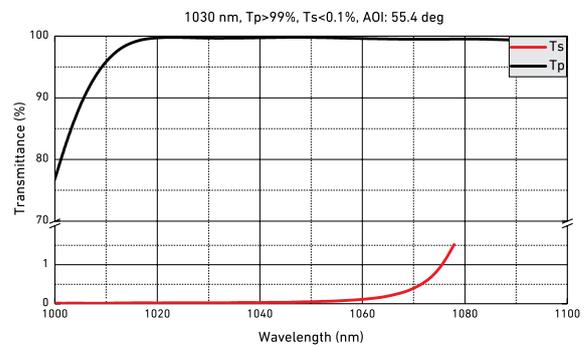

## Main features

- Substrates fabricated from high-quality UV grade fused silica optical glass
- Designed for most popular laser line and harmonic wavelengths
- Brewster and 45° angle of incidence selection
- Typical extinction ratio Tp:Ts > 1000:1
- Custom dimensions, operating wavelength available upon request

## Application examples

- Polarization separation
- Optical isolation
- Polarization cleaning
- Laser power attenuation

Optogama standard high contrast Brewster-type and 45° thin-film polarizers provide high extinction ratio Tp:Ts > 1000:1 thanks to the ion beam sputtered (IBS) thin-film coatings. Moreover, these polarizers are ideal for high-power levels and UV wavelength range. Optogama design and manufacture standard and custom Brewster type high contrast polarizers for the wavelength range between 230 nm and 2000 nm with face dimensions up to 160 mm.

## Standard specifications

HIGH CONTRAST THIN-FILM POLARIZERS	
Material	UVFS
Clear aperture	>85%
Face dimensions tolerance	+0/0,15 mm
Thickness tolerance	± 0,25 mm
Parallelism error	<30 arcsec

# Beam delivery device

Optogama designs and manufactures compact laser beam delivery systems, laser beam expanders, reducers, divergence compensators and laser power attenuators, which are used to increase or decrease laser beam diameter, control beam divergence, and adjust laser power.

# n ery ces

Compact motorized laser beam expanders MEX

High-power motorized beam expanders MEX-HP

Vertical motorized laser beam expander MEX-V

Variable beam expanders VEX and reducers VRE

Fixed ratio laser beam expanders FEX

Motorized laser power attenuators LPA

Manual laser power attenuators LPA-M

Unpolarized beam motorized laser power attenuator LPA-U

Flat top converter FTC

Motorized polarization rotator MRO

# Compact motorized laser beam expanders MEX

## Main features

- Highest beam pointing stability (< 0,3 mrad)
- All-in-one design with integrated controller
- Two lens simultaneous SMART movement assuring no misfocus
- Absolute encoder (both lenses)
- Adjustment time <1 sec (all magnifications)
- Fused silica optical elements
- No homing after switching on/off
- Diffraction limited performance for all magnifications

## Application examples

- Industrial laser micromachining
- Life sciences
- Research

Motorized laser beam expanders MEX series are used to increase the laser beam diameter and adjust divergence. Standard or custom-made beam expanders feature a unique mechanical closed loop sliding-lens design ensuring high pointing stability and minimal dimensions. These variable magnification (zoom) beam expanders and reducers are designed for required wavelength and each type of our beam expanders have motorized divergence adjustability.

## Standard specifications

MOTORIZED BEAM EXPANDERS SPECIFICATIONS	
Adjustment	Motorized
Divergence	Adjustable
Clear input aperture	11,5 mm
Transmission	>97%
Optical element number	3 (MEX13, MEX18), 4 (MEX18-ACH)
Lens material	UVFS
Control interface	USB or RS232
Housing material	Black anodized aluminum
LIDT	3 J/cm <sup>2</sup> (10 ns @ 355 nm) 5 J/cm <sup>2</sup> (10 ns @ 532 nm) 10 J/cm <sup>2</sup> (10 ns @ 1064 nm)

\*Custom design available

## Mounting options for high-power motorized beam expanders MEX-HP

MOUNTING OPTION	FOR BEAM HEIGHT OF	SKU	PRICE
Manual 4 axis translation stage M-STAGE-W	27 mm (±2 mm travel)	29135	650 €

# Vertical motorized laser beam expander MEX-V

## Main features

- High power optical design (up to 200 W @ 1030 nm, 500 fs, 1 Mhz)
- No internal reflections on optical elements
- High beam pointing stability <0,2 mrad
- All-in-one design with integrated controller
- Two lens simultaneous movement assuring no misfocus
- Absolute encoder (both lenses)
- Adjustment time <4 sec (all magnifications)
- Fused silica optical elements
- Diffraction limited performance for all magnifications
- No mounting limitations

## Application examples

- Precise laser micromachining
- High power laser beam management
- Research

Vertical motorized laser beam expanders MEX-V series are used to increase the laser beam diameter and adjust divergence. The optical design is dedicated for high power ultrafast femtosecond laser applications. Slower and more stable lens control combines the advantages of a high-power model with the ability to be mounted vertically for greater functionality.

These magnification (zoom) beam expanders are designed for the required wavelength and each type of our beam expanders has motorized divergence adjustability. Standard or custom-made beam expanders feature a unique mechanical closed-loop sliding-lens design ensuring high pointing stability and minimal dimensions.

## What's in the box?

- Motorised laser beam expander MEX-V
- USB key with software and manual
- Power supply DC 12V
- USB (1,5 m) cable

# Variable beam expanders VEX and reducers VRE

## Main features

- Highest beam pointing stability ( $< 0,5$  mrad)
- Fused silica optical elements
- Grease free mechanical design
- Sliding lens design
- Diffraction limited performance for all magnifications

## Application examples

- Laser micromachining
- Research

Optogama introduces variable manual beam expanders VEX series used to increase or decrease the laser beam diameter. Standard or custom-made laser beam expanders for the UV, visible, and NIR spectral ranges feature a unique mechanical sliding-lens design, ensuring a high pointing stability and minimal dimensions. These variable magnification (zoom) beam expanders are designed for the required wavelength and each type of our beam expanders have divergence adjustability.

All optical elements of beam expanders are made of fused silica with high LIDT coatings and provide stable and reliable performance even when using them with high power lasers. Large input and output apertures allow the optical beam expanders to produce diffraction limited expanded (or reduced) beams for a wide range of input beams.

# Fixed ratio beam expanders FEX

## Main features

- Divergence adjustment
- Galilean optical design
- UVFS optical elements
- Grease free mechanical design
- Wide wavelength adoption - 200 nm to 2 μm

## Application examples

- Laser material processing
- Medical
- Research

Fixed ratio beam expanders FEX series are used to increase the laser beam diameter. The FEX model diversity covers the UV, visible and NIR spectral ranges. These compact beam expanders are designed for required wavelength and have divergence adjustability. All optical elements of beam expanders are made of fused silica with high LIDT coatings and provide a stable and reliable performance even using them with high power lasers.

# Motorized laser power attenuators LPA

## Main features

- Robust design
- Damage threshold up to 10J/cm<sup>2</sup> (10 ns @ 1064 nm)
- Adjustable polarizer angle ±2 deg
- Clear aperture 18 mm
- External controller included
- Intuitive software
- 175,543 steps in full rotation
- ± 0,05 % laser power accuracy
- Adjustment time <0,2 sec (min to max)

## Application examples

- Laser machining
- Research
- Laser power control and attenuation

Optogama designs and manufactures motorized laser power attenuators for laser power control. LPA could be produced for use in the UV, visible, and NIR spectral ranges from 250 nm to 2000 nm. These devices feature a large clear aperture dedicated for considerable beam application. All optical elements of these laser power attenuators are made for high LIDT and provide a stable and reliable performance even when using them with high power lasers in industrial applications. Secondary laser beam from the laser power attenuator unit is rejected out through the output window to an external beam dump (optional) in order to avoid any thermal effects or stress in the housing of the LPA device. Exit laser beam has a 2,25 mm beam offset.

## Standard specifications

MOTORIZED LASER POWER ATTENUATOR SPECIFICATIONS	
Input and output clear aperture	18 mm
Dimensions (H x W x L)	58 x 36 x 74,5 mm   58 x 51,5 x 74,5 mm with beam dump
Control interface	USB and RS232
Controller	External

# Advanced motorized laser power attenuators LPA-A

## Main features

- Integrated controller
- Absolute encoder - no homing required
- High accuracy -  $\pm 0,004$  deg (less than  $\pm 0,01$  % of laser power)
- Resolution - 0,002 deg, 7,4 arcsec, 0,035 mrad
- Fast adjustment - less than 0,2 sec (min to max)
- High damage threshold: up to  $10\text{J}/\text{cm}^2$  (10 ns @ 1064 nm)
- Adjustable polarizer angle

## Application examples

- Precise laser micromachining
- Laser power control and attenuation
- Research

Advanced laser power attenuator LPA-A is a compact motorized device for laser power control with an integrated controller and absolute encoder. The LPA-A is produced in the UV, visible and NIR spectral ranges, from 250 nm to 2000 nm. This device is combined with the unique mechanical design which ensures repeatability and high stability of performance. All optical components of the LPA-A are made for high LIDT and provide a stable and reliable performance even when using them with high power lasers in industrial applications. A secondary laser beam from the laser power attenuator unit can be rejected to an external beam dump. The beam dump is used for avoiding any thermal effects or stress in the housing of the LPA-A device.

# Unpolarized beam motorized laser power attenuators LPA-U

## Main features

- Designed for unpolarised laser beam
- Up to 200W of average laser power
- Beam offset compensated
- Integrated controller
- Absolute position encoder - no homing required
- High accuracy  $\pm 0,005$  deg
- Robust design with water-cooling
- Clear aperture -  $\varnothing 12$  mm
- Fast adjustment - less than 0,5 sec (min to max)
- High damage threshold: up to  $10\text{J}/\text{cm}^2$  (10 ns @ 1064 nm)

## Application examples

- Precise laser micromachining
- Laser power stabilization
- Research

Advanced motorised laser power attenuator LPA-U is a unique device designed for unpolarised laser power control with integrated controller and absolute position encoder.

The LPA-U is produced in the UV, visible and NIR spectral ranges, from 343 nm to 2000 nm and 10,6  $\mu\text{m}$ . This device is combined with the unique mechanical robust design which ensures high repeatability.

All optical components of the LPA-U are made for high LIDT and provide stable and reliable performance even using them with high power lasers in industrial applications.

A secondary laser beam from laser power attenuator unit is rejected to an internal beam dump. Water-cooling is used for avoiding any thermal effects or stress in the housing of the LPA-U device.

## Standard specifications

### UNPOLARIZED BEAM MOTORIZED LASER POWER ATTENUATOR LPA-U SPECIFICATIONS

Input and output clear aperture	12 mm

# Flat top converter FTC

## Main features

- Quick change between Gaussian and Flat-top beam
- The beam profile remains Flat-Top shape along optical axis
- Integrated controller
- Designed according your laser specs.
- Clear aperture up to 15 mm
- Quick switching time - 0.2 sec
- High damage threshold up to 10J/cm<sup>2</sup> (10 ns @ 1064 nm)
- Conversion efficiency up to 70% (while on Flat-Top mode)

## Application examples

- Precise laser micromachining
- Life sciences
- Research

Flat top converter unit is "all in one" motorized solution for a Gaussian beam transformation to a Flat-Top (Top Hat) beam. The beam profile remains Flat-Top shape along optical axis. The device consists of quartz wave-plate, space-variant wave-plate and a high contrast polarizer. The FTC is produced in the UV, visible and NIR spectral ranges, from 250 nm to 2000 nm. All optical components of the FTC are made for high LIDT and provide stable and reliable performance even using them with high power lasers in industrial applications. A secondary laser beam from Flat top converter unit can be rejected to an external beam dump. The beam dump is used for avoiding any thermal effects or stress in the housing of the FTC device.

## Standard specifications

FLAT TOP CONVERTER FTC SPECIFICATIONS	
Input and output clear aperture	ø15 mm (depends on waveplate)
Conversion efficiency and transmission	Up to 70 % (Flat-Top beam mode) No less than 97 % (Gaussian beam mode)
LIDT coating	>10 [J/cm <sup>2</sup> ] (10 ns @ 1064 nm)
Controller	USB and RS232
Control interface	External
Dimensions (H x W x L)	105 x 53 x 62,5 mm FTC 105 x 70 x 62,5 mm FTC with beam dump (BD-6)

\*Custom design available

# Motorized polarization rotator MRO

## Main features

- Compact design
- High resolution 175543  $\mu$ steps in 360 deg rotation
- High accuracy -  $\pm 10$   $\mu$ steps accuracy ( $\pm 0,02$  deg)
- Clear aperture - 18 mm
- Fast adjustment - less than 0,2 sec (0 to 45 deg)

Rotator (MRO) is a compact motorized device for laser polarization control. The MRO is produced in the UV, visible and NIR spectral ranges, from 250 nm to 2000 nm. The device has external controller. All optical components of the MRO are made for high LIDT and provide stable and reliable performance even using them with high power lasers in industrial applications.

## Standard specifications

				without optics	None	None

Optogama offers a variety of laser accessories designed and dedicated to enhancing your capabilities to visualize, guide and to monitor near infrared (NIR) and ultraviolet (UV) laser beams, parasitic reflections or losses in the fibers.

Compact laser pointers provide a visible reference for rough alignment and initial

setup, while our special optics positioners offer the precision and stability needed for fine-tuning laser beam alignment. These accessories ensure that laser systems perform optimally and maintain their alignment over time, which is crucial for various applications, including scientific research or industrial laser integration.

# Laser accessories

# r SSO -

Infrared (IR) viewers

UV-NIR laser beam visualizers

Manual 4 axis translation stage

4 axis Kinematic mount

XY industrial holders

Compact laser modules

# Infrared (IR) viewers

## Main features

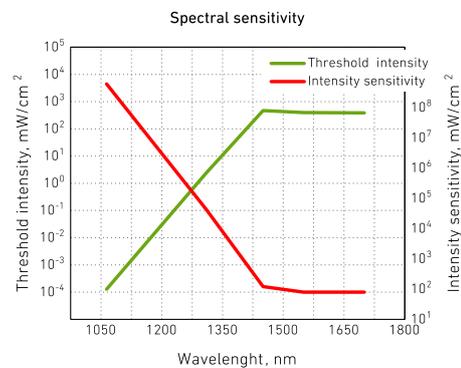

- Spectral region 400 - 1700 nm
- Resolution > 30 Lp/mm
- Hand-held / post mounted
- Up to 10 hours battery life, rechargeable
- Pulsed and CW light detection

## Application examples

- Location and alignment of Nd: YAG Yb:YAG, Yb:KGW, Ti:Sapphire and other IR lasers
- Identification of stray IR reflectations
- Observation of GaAs laser diodes, IR LED's, dye and other IR-sources
- Forensic analysis on inks, pigments

The digital version of the IR viewer is based on the multiphoton absorption (MPA) phenomenon when the laser wavelength exceeds the linear spectral detection range of the silicon material.

In addition, the process of photoelectrons requires spatial and temporal filtering from noise to enhance the visualization of IR photons beyond the 1.1 μm spectrum. By adjusting the gain on a pixel-by-pixel basis, it is possible to achieve imaging up to 1.7 μm.

## Standard specifications

IR-VIEWERS SPECIFICATIONS	
Resolution	>30 Lp/mm
Working distance of lens	12,5 (+/-0,2) mm
Distortion of image	<0,5 %
Battery life (continuous)	Up to 10 hours battery life, rechargeable 2x 18650 batteries
Weight	0,4 kg
Dimensions	153 x 175 x 51 mm

# UV-NIR laser beam visualizers

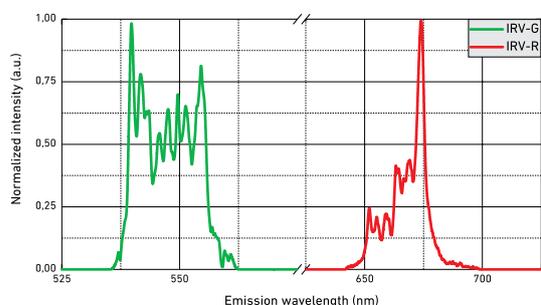

## Main features

- Wavelength detection from UV to NIR
- Suitable for CW and pulsed laser light
- High sensitivity to laser radiation – 0,1 mW/mm<sup>2</sup>
- Damage threshold for pulsed laser – 1 J/cm<sup>2</sup>, 10 ns
- Both sides are active

## Application examples

- Laser alignment
- Research

Laser beam visualizers are designed to detect UV and IR both CW and pulsed laser light radiation. These visualizers are fabricated from aluminum with an organic polycrystal photosensitive region, which enables easy location of UV-VIS-NIR light beams and focal points. As it is not necessary to charge the active region both CW and pulsed laser light will be detected even in darkened room conditions.

# Manual 4 axis translation stage

## Main features

- Sapphire contact pads
- Industrial design
- 4 axis fine adjustment
- Maximum load up to 1,5 kg

## Application examples

- Motorized beam expander MEX fine adjustment
- Precise alignment of optical components and other laser accessories

MSTAGE is an industrial mounting solution for MEX compact series beam expanders. This 4-axis manual translation stage contains a locking mechanism preserving the aligned position. It features sapphire contact pads determining long-lasting and smooth micro screw operation. There are four M6 x 0,25 micro screws for adjusting platform's pitch, yaw, Y and Z axis. Two micro screws control platform's pitch and Z axis, while another two-control yaw and Y axis. All of them can be adjusted with 2 mm HEX screwdriver.

# 4 axis Kinematic mount

## Main features

- Sapphire contact pads
- Locking mechanism of all 4 axis
- Industrial design
- 4 axis fine adjustment
- Maximum load up to 1 kg

## Application examples

- Variable beam expander VEX fine adjustment
- Industrial mounting of other laser accessories

KMOUNT is an industrial mounting solution for VEX manual variable beam expanders.

This 4-axis manual kinematic mount contains a locking mechanism preserving the aligned position on all 4 axis. It features sapphire contact pads determining long-lasting and smooth micro screw operation.

There are 2x M6 x 0,25 and 2x 3/16"-100 micro screws for adjusting the platform's pitch, yaw, Y, and X-axis.

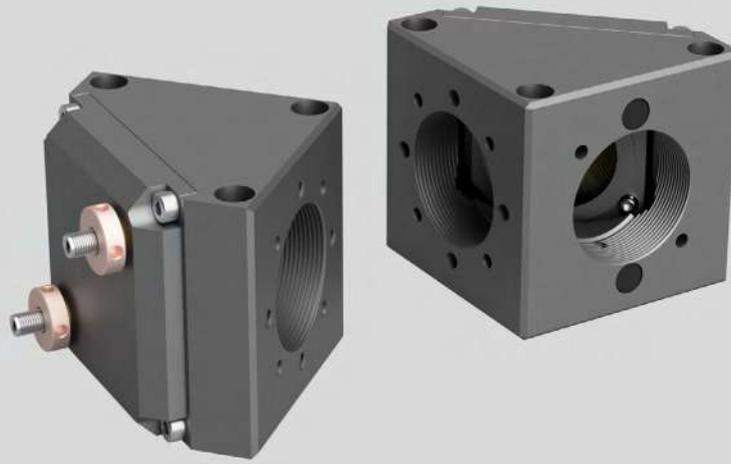

Two micro screws control platform's tilt, while another two-control XY axis. All of them can be adjusted with a 2 mm HEX screwdriver.

## Standard specifications

# XY industrial holders

## Main features

- Sealed industrial design
- Reflection or Refraction + Transmission design
- Attaches together at any direction
- 3 axis fine adjustment
- Combines with sealing tubes for enclosing laser path

## Application examples

- Precision optics mounting
- "Closed" optical system
- High power laser beam guiding
- Beam delivery systems

XY-IND are 2-axis and 3-axis sealed industrial kinematic mirror/splitter mounts. It combines with sealing tubes in both ends for optics and laser beam path protection from dust and environment. The mounts are easily attached together at any direction.

There are two types of holders:

- 2-axis and 3-axis Reflection type - is typically used with mirror.
- 3-axis Reflection + Transmission type - is typically used for splitting or filtering the laser beam.

# Compact laser modules

## Main features

- Industrial design
- 2 axis fine adjustment
- Locking mechanism of all 2 axis

## Application examples

- Beam alignment
- Demonstration of laser systems

The compact laser module (CLM) is a precision-engineered optical tool designed to operate at 520 and 635 nm wavelengths. Offering adjustable beam control, with  $\pm 3^\circ$  pointing angle,  $< 1$  mrad beam divergence, and 4,5 mW of average power. It can be used in laser system alignment, optical experimentation, and educational demonstrations, providing reliability in a compact package.

## Standard specifications

SPECIFICATIONS	
Operation wavelength	520, 635 nm
Mode of operation	CW
Average output power	4,5 $\pm$ 3 mW
Beam mode	Single mode
Beam diameter	4 mm
Beam divergence	$< 1$ mrad
Operating temperature	-10°C to +50°C
Electrical power consumption	3-5 V AC, $< 160$ mA
Laser head size (L x W x H)	39 x 27 x 41 mm
Pointing adjustment	$\pm 3^\circ$
Degree per rotation	0,5°/rotation

## Standard products

WAVELENGTH	AVERAGE POWER	BEAM DIAMETER	LASER HEAD SIZE (L X W X H)	PONTING ADJUSTMENT	SKU	PRICE

E-mail: sales@optogama.com

## 1. Prices and payment

All price quotations are subject to confirmation and are non-binding. Unless otherwise agreed to by Optogama in writing, and all prices for the sale of Product are stated in and to be paid in € (Euro).

For the orders below 200 € additional documentation and handling fee may be applied.

All payments are due and payable in thirty (30) days from date of invoice. Optogama reserves the right to require alternative payment terms, including without limitation letter of credit or payment in advance.

Payments not made by the due date shall be subject to a late payment charge of the lesser of 0,2 % per day or the maximum rate permitted by law. Bank fees associated with payment should be paid by the Buyer.

Payment can be made by wire transfer or credit card.

## Wire transfer details:

Account number (IBAN): LT88 7044 0600 0802 0123  
Bank name:  
AB SEB Bankas, address: Konstitucijos Ave. 12, LT-01103 Vilnius, LITHUANIA  
SWIFT Code: CBVI LT 2X  
Beneficiary:  
Optogama UAB, address: Mokslininku str. 6B, LT-08412 Vilnius, LITHUANIA

## Payment using PayPal, credit, or debit card:

Your payment will be processed through PayPal payment system. PayPal allows you to make payments using a variety of methods including: PayPal Cash or PayPal Cash Plus account balance, a bank account, PayPal Credit, debit or credit cards, and rewards balance.

Please request Proforma Invoice for advanced payment. PayPal payment fee: 4% from total order amount + delivery costs.

## 2. Delivery and delays

Delivery dates noted on the Order Confirmation are subject to reasonable adjustment. The acceptance of shipment by a common carrier or by any licensed public truckman shall constitute proper delivery.

In case Optogama is unable to deliver ordered goods in time, Optogama shall notify buyer of this and at the same time, if possible, provide buyer with information on expected delivery date.

Optogama shall not be responsible for any loss suffered by buyer, including loss on operations, loss of profits or other indirect losses as a result of the delay in delivery, and consequently Optogama shall not compensate buyer for any of such loss.

Optogama reserves the right to deliver Products on DAP (Incoterms 2010) basis by DHL, UPS, TNT, FedEx or other forwarders and request to cover delivery charges by the Buyer.

## 3. Limited warranty and liability

All products are guaranteed to be free from defects. Claims are accepted for a period of three months after delivery. We do not assume liability for installation, labor, or consequential damages.

Optogama shall not be liable for any defects or losses suffered by buyer, including loss on operations, loss of profits or other indirect losses as a result of the defects, and consequently Optogama shall not compensate buyer for any of such loss.

Consequently, Optogama shall have no liability for any personal injury, property damage or other loss based on the use of the product in combination with or integrated into any other instrument or device. However, if Optogama is held liable, whether directly or indirectly, for any loss or damage arising under this limited warranty or otherwise, regardless of cause or origin, Optogama maximum liability shall not in any case exceed the purchase price of the product which shall be the complete and exclusive remedy against Optogama.

## 4. Product return or repair

Buyer will notify Optogama about the occurrence of defective or non-operational Product and request a Return Authorization Number (RMA) from Optogama for the items Buyer would like to return for repair or replacement by email. This RMA number is to be used for all correspondence and shipping documents that relate to the Product. Buyer will ship the defective or non-operational Product to Optogama. Buyer is responsible for shipping cost.

Upon receipt of the returned Product, Optogama will test the Product to verify the defective status of the component within the terms of the Limited Warranty and communicate such results to Buyer.

Optogama will either send a repaired or replacement Product after verifying that the Product returned under the RMA number is in fact defective within the terms of the Limited Warranty. Optogama is responsible for shipping costs of replacement Product to the Buyer.
